# **Software Modernization Committee Interim Report**

October 15, 2024 Software Modernization Committee

## Introduction

We have entered an era in which software determines a company's competitiveness. We are moving to a "Software-Defined" society in which software realizes solutions to problems, and the effectiveness of these solutions is enhanced through continuous improvement while using the software.

In Japan, however, old practices and values remain, and international competitiveness is declining without an appropriate response to the problems it faces.

The Software Modernization Committee is examining ways to maximize software's value and achieve industrial competitiveness and sustainable social development.

This interim report provisionally outlines the desired direction and key themes.

## **Reference: What is Software-Defined?**

"Software-Defined" is a concept that seeks to achieve more excellent value by continually updating the software that controls hardware to respond to uncertainty and changing needs.

To tackle difficult social issues and create innovative technology, Software-Defined mechanisms must be used to repeatedly test hypotheses and derive solutions while interacting with the real world.

#### Example) Software-Defined Vehicle

Even after selling the car, the software can be updated remotely to add functions and improve performance. This makes it possible to improve performance, driving assistance, and accident prevention functions and increases the possibility of realizing new functions that were previously impossible.

The Voyager spacecraft, launched in 1977, has been exploring beyond the solar system while undergoing software updates. Most recently, in October 2023, the fuel injection system was changed to extend the satellite's life.

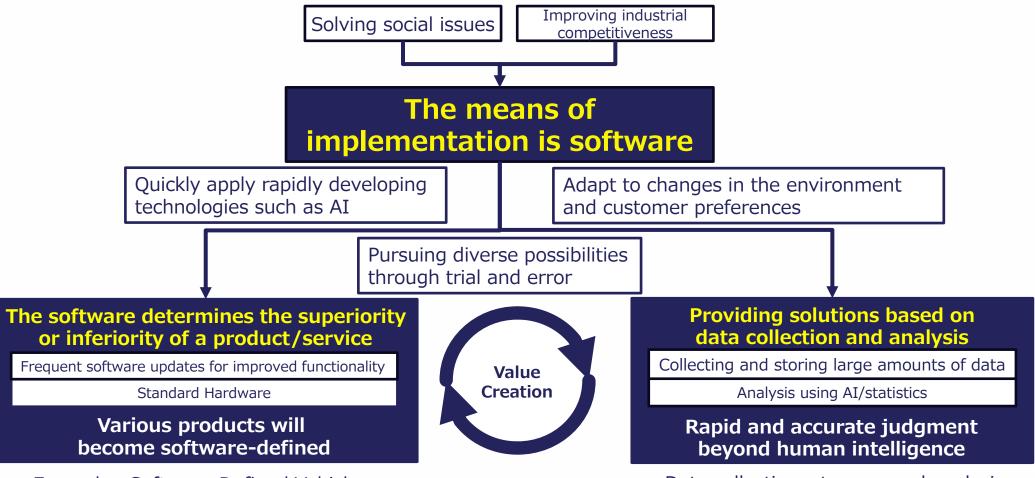

## **Background: Shift to a Software-Defined Society**

We are entering a Software-Defined society where value is created by software.

Example: Software-Defined Vehicle PC/smartphone updates

Data collection, storage, and analysis are achieved through software

# Goal: Prosperous Japanese society that shines on the world

We aim to create a society where companies and human resources have global-level technological capabilities, move at the same speed as the rest of the world, solve social issues, and continue improving Japan's competitiveness.

Maintenance and development of a safe and secure society

- Global warming countermeasures
- Disaster prevention measures
- Measures for aging society
- A fair, just and efficient system etc.

Friendly competition with developed countries/peoples

- Collaboration and partnerships with advanced research institutes and companies
- Promising talents are working for leading companies around the world
- Invitation of high-level leaders

Contribution to the international community

Solving social issues

World-class technological capabilities

Gathering information and developing

Human resources

• Expanding the base of activities rooted in local communities

technology simultaneously with the rest of the world

- · Science-based training and evaluation methods
- IT literacy in a wide range of industries/occupations

Securing Japan's position in the global community

- International deployment of proven technologies and solutions
- Collaboration with leading global partners
- Strengthening competitiveness in a wide range of industries, including materials, machinery, and medical care
- Producing Japanese people who are active around the world

Participating in the birthplace of technology

- Proactively participate in the advanced arena because you will always be late in introducing technologies originating in the U.S. and Europe.
- Instead of a pattern of domestic technology verification and deployment followed by international expansion, the company will expand globally from the beginning

Products, services and systems using advanced software technology

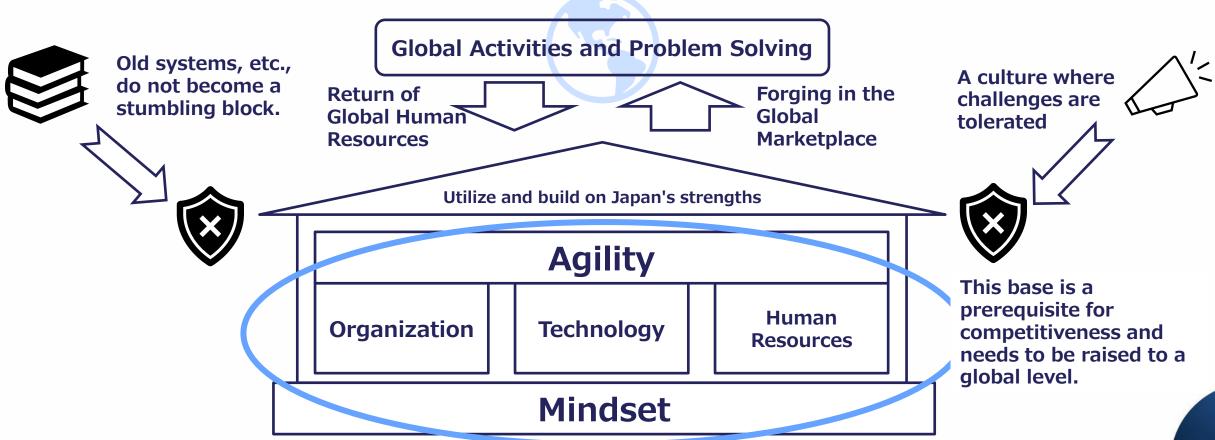

Data Infrastructure to Support Accurate Decisions

Learn from successful examples of companies that have secured international competitiveness in sports/film, etc., and transform your organization and mindset by targeting the global market from the beginning.

## What is expected of companies in the coming years

It is necessary for companies to acquire competitive strengths such as global standard "organization", "technology," and "human resources" and to be prepared to throw themselves fully into global competition.

## What is expected of individuals in the coming years

"Spirit of Challenge", "Global-Oriented", and "Skill Development" will be required in the coming years.

#### Global-Oriented

- ✓ Global perspective, not domestic
- ✓ Direct collection of information not only from domestic sources but also from overseas media and educational materials
- ✓ International experience and participation in the international community

#### Spirit of Challenge

- ✓ A spirit of challenge for new initiatives and improvements
- ✓ Recognizing that even failure is an "accomplishment" if we can learn from it
- ✓ Out-of-the-box thinking

#### Skill Development

- ✓ Acquire new skills and techniques in response to changes in the environment, not just what is required by the company
- ✓ Self-directed skill development
- ✓ Consciousness of output as well as input

## Comparison of international and domestic trends

- Japan's IT is lagging in some areas compared to other countries.
- Urgent need to grasp the situation at home and abroad and bring Japan up to the global level.

#### **International Trends**

**Domestic Trends** 

Model-Based Development
Building Blocks, OSS utilization
Use of Agile and DevOps
Skills-based talent management
AI utilization, data maintenance and handling
Promote Digital Engineering, Cloud/Edge/IoT
Balance of security, high reliability
Promote visualization and modeling of rules (LegalTech)

Document-Based Development (office software based)
Scratch development
Agile, DevOps implementation underway
Experience and background-based talent management
Lack of AI implementation, insufficient/undeveloped data
Digital Engineering, Cloud/Edge/IoT not yet started
Emphasis on security and high reliability
Insufficient visualization

Aim not only to catch up but also to run side by side (solve global problems/participate/contribute to technological development).

# **Key Themes (Draft)**

#### Mindset

- Raise awareness of the importance of software.
- Consideration of global competitive strategy (path to parallel competition).

#### **Organization**

- Consideration and promotion of Building Block Software(OSS, API, etc.) .
- Promotion of standardization of processes other than system development, such as contracts.

#### **Technology**

- Consideration and promotion of visualization (modeling, SBOM, etc.).
- Consideration and promotion of EdgeCloud.

### Human Resources

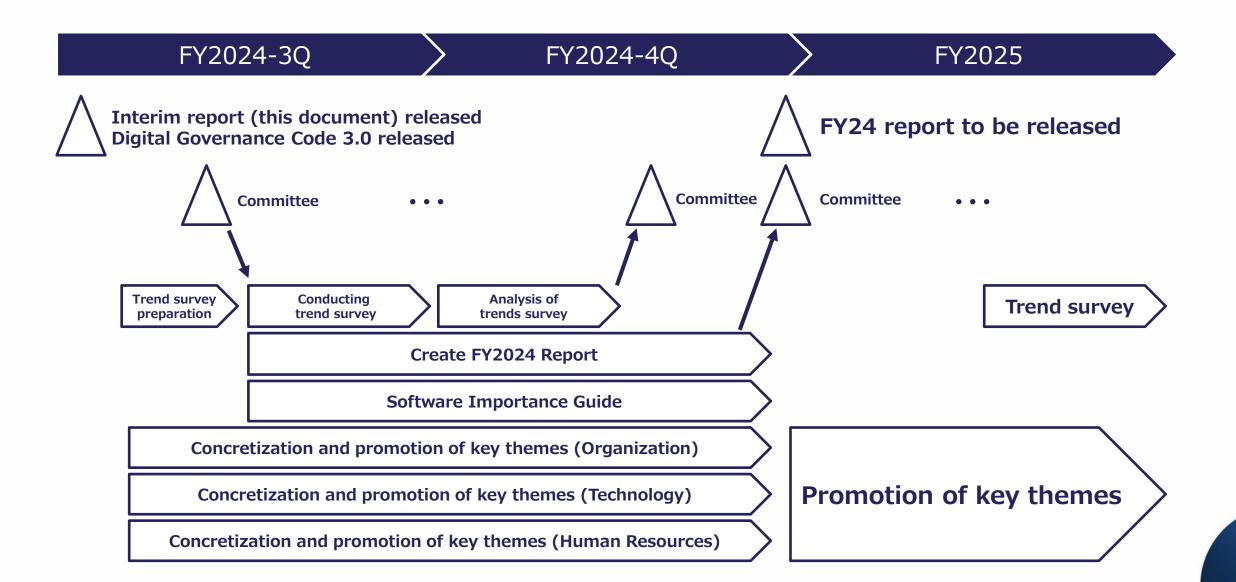

- Promotion of Digital Skills Standards (DSS)
- Promotion of the use of overseas educational materials.
- Promotion of global human resource exchange and information gathering.

#### **Other**

- Trend survey to grasp the actual situation (organization, technology, personnel).
- Consideration of LegalTech.
- Consideration of initiatives in the public sector.

# Schedule (Draft)

Reference:

Overview of the Software Modernization Committee

## **Event Overview**

Considering the dramatic changes occurring in the software environment, IPA
has established a committee to review its quantitative surveys and, in
cooperation with industry associations, to consider modernizing software
development and operations.

Event	Date	Main themes	
1st Committee Meeting	June 11, 2024	Discussion of the direction to take.	
2nd Committee Meeting	July 18, 2024	<ul> <li>Discussion of how to proceed with the future of this committee.</li> </ul>	
1st Workshop (held by volunteer members)	August 1, 2024	<ul> <li>Discussion of the future of Japan considering social trends.</li> <li>Discussion of the future direction that Japanese society will take.</li> </ul>	
3rd Committee Meeting	August 22, 2024	Discussion of the direction to take.	
2nd Workshop (held by volunteer members)	September 5, 2024	Discussion of the committee's future roadmap.	
4th Committee Meeting	September 25, 2024	• Discussion of the interim report outlining the direction we are aiming for and the roadmap for the future.	

## **Committee Members**

Туре	Name	Affiliation	Remarks
Chairperson	Takeshi Hayama	NTT DATA GROUP CORPORATION	
Committee Member	Hiroshi Kaneko	TOSHIBA CORPORATION	JEITA REC
Committee Member	Hajime Kurosaka	SIOS Technology, Inc.	JOPF REC
Committee Member	Takuya Saito	NEC Corporation	
Committee Member	Akihiro Saimi	Hitachi Solutions, Ltd.	
Committee Member	Akihiko Nagasaka	Future Architect, Inc.	MCIS REC
Committee Member	Kazumaro Hino	Obic Business Consultants Co.,Ltd.	SAJ REC
Committee Member	Norihisa Fujimoto	Japan Users Association of Information Systems	JUAS REC
Committee Member	Osa Hori	SCSK Corporation	JISA REC
Committee Member	Minoru Yasunaga	TIS Inc.	
Committee Member	Hiroyuki Watanabe	eXmotion Co., Ltd.	JASA REC
