## 1. ST INTRODUCTION

The Security Target (ST) applies to complete Multifunction Peripheral (MFP) that includes the entire hardware and software components that provide the functionality for printing and scanning documents over the network, through email and on the MFP; and document storage and retrieval. The ST complies with IEEE Std 2600.1 Protection Profile for Operation Environment A which is in compliance with the *Common Criteria for Information Technology Security Evaluation, Version 3.1 release 3* 

## 1.1. Security Target Reference

The details are as follows:

Title TOSHIBA e-STUDIO2050C/2550C MULTIFUNCTIONAL DIGITAL SYSTEMS

Security Target

Version 1.0

Author TOSHIBA TEC CORPORATION

Publication Date October 11, 2012

## 1.2. TOE Reference

Following are the details of the TOE Reference:

TOE Name TOSHIBA e-STUDIO2050C/2550C MULTIFUNCTIONAL DIGITAL SYSTEMS

TOE Version Number SYS V1.0

Developer Name TOSHIBA TEC CORPORATION

This TOE is an MFP, TOSHIBA e-STUDIO2050C or TOSHIBA e-STUDIO2550C, with the optional HDD kit, GE-1220.

## 1.3. TOE Overview

The Security Target provides the requirements for the **TOSHIBA e-STUDIO2050C/2550C MULTIFUCTINAL DIGITAL SYSTEMS** Target of Evaluation (TOE) for IEEE Std 2600.1 Protection Profile for Operational Environment A. Operational Environment A is generally characterized as a restrictive commercial information processing environment in which a relatively high level of document security, operational accountability, and information assurance, are required. Typical information processed in this environment is trade secret, mission-critical, or subject to legal and regulatory considerations such as for privacy or governance. This environment is not intended to support life-critical or national security applications. The Security Target provides the requirements for the Toshiba MFP Target of Evaluation (TOE) for IEEE Std2600.1 Protection Profile for Operational Environment A.

## 1.3.1. Usage and Major Security Features of the TOE

The TOE is mainly used to perform the following functions:

- · Copy function
- · Print function
- · Scan function
- · Internet Fax function
- · e-Filing function

The TOE provides the following security features:

- · User Authentication
- · User Access Control
- · Data Encryption
- · Audit Data Generation and Review
- Secure Erase
- · Secure Channel
- · TSF Self Protection
- · TSF Data Protection

The TOE is the MFP and implements the TOE Security Functions of User Authentication for MFP, Data Encryption, and Device Configuration Protection. It provides Role Based Access Control (RBAC) where users can be assigned various roles and thus restricted to specific permissions on TOE assets. The TOE provides residual data protection using secure erase of user documents. In addition, it provides support for network security protocols such as SSL/TLS, IPPs and maintains an audit log where the key events are recorded and whose integrity and confidentiality are assured. The TOE also executes the integrity test and restricts TSF data management to the permitted roles.

## **1.3.2. TOE Type**

The TOE is a Multifunction Systems that works in a network environment and provides capabilities of print, copy, and scan.

#### 1.3.3. Environment Assumptions

The TOE is assumed to be used as an IT product at general office, user clients, and the internal network protected from threats on the external network by firewall etc. Necessary security functions work by setting it in a high security mode at the time of setup of TOE. For executing Secure Erase, an optional kit, GP-1070(Data Overwrite kit), is required to be purchased.

Figure 1 Environment for the usage of the MFP

## 1.3.4. Required Non-TOE Hardware and Software

Hardware other than the TOE and its operational environment are described below.

## (1) Client PC

The PC in which a universal OS is installed, and can execute the followings.

The U.NORMAL can request printing of document data through LAN or USB interface to the TOE, and saving and retrieving document data in e-Filing Box by which the U.NORMAL registered. The U.ADMINISTRATOR can refer to or change the setting data in the MFP using the Web browser.

The Client PC was evaluated under the following environment.

- · OS
  - Windows XP
  - Windows Vista
- · Browsers:
  - Internet Explorer Ver.8.0

## · Client Utility Software:

- Address Book Viewer Ver. 3.2.36.0
- e-Filing Back Up/Restore Utility Ver. 3.2.28.1
- File Down Loader Ver. 3.2.34.1
- TWAIN Driver Ver. 3.2.34.1
- Printer Driver Ver. 7.49.1733.0

### (2) Mail Sever

The Mail Server is a server which transmits/receives email using POP/SMTP. The TOE and the Mail Server is connected with SSL communication.

## (3) LDAP Server

When a TOE user is registered to and managed with the LDAP Server, user authentication is executed through the LDAP Server. Connection between the TOE and the LDAP Server must be secure by using SSL. In this document, only internal authentication is supported, and external authentication with the LDAP Server is not supported.

### (4) Domain Server

It is possible to execute user authentication using the Domain Server on the network which manages the TOE user with the Windows domain. Connection between the TOE and the Domain Server must be secure by using SSL. In this document, only internal authentication is supported, and external authentication with the Domain Server is not supported.

### (5) SMB Sever

The SMB Server is a server which transmits and receives files between the TOE and the Client PC using the Server Message Block Protocol. It is not guaranteed if the files are managed by being saved in the SMB server.

## (6) Fire Wall

When internal network accesses the external network, the connection must be made via Fire Wall so as to prevent unauthorized access from the external network.

## (7) FTP Server

The FTP Server is a server which activates the File Transfer Protocol Server Software.

## (8) NTP Server

The TOE internal clock has a function to synchronize with the NTP server which is opened to the public. It is not guaranteed if the clock in the TOE is managed by synchronizing with the NTP server.

#### (9) Printer Driver

The Printer Driver is a software which is installed to the computer to enable printing from an application. Advanced print functionalities, such as document layout and page formatting, that cannot be set with an application are supplied.

## (10) Address Book Viewer

Address Book Viewer is a client software which can manage the email address of the destination.

## (11) e-Filing Box Backup/Restore Utility

e-Filing Box Backup/Restore Utility can back up or restore e-Filing Box Data (image data/each setup data).

## (12) TWAIN Driver/File Downloader

TWAIN Driver or File Downloader can retrieve documents stored in e-Filing Box of the TOE into the Client PC through TCP/IP Network.

## 1.4. TOE Description

This section describes the physical boundary, logical boundary, and functions regarding the e-STUDIO2050C/2550C.

## 1.4.1. Physical Boundary

The TOE consists of the following:

Multifunctional Digital System

The TOE does not consist of the following:

- · Client side driver modules
- · External Authentication Server
- · USB Strage Device

Figure 2 Physical Boundary

## (1) Operation Panel Unit

The Operation Panel Unit is a user interface by which a U.USER operates the MFP. Hardware construction is operation buttons, LEDs, and LCD with a touch panel. Information from the MFP is displayed on the LCD and each operation such as copy start is executed by communicating with the System Control Unit.

## (2) Scanner Unit

The Scanner Unit is an input device which scans paper original and transmits the image data to the System Control Unit.

## (3) RADF (Reverse Auto Document Feeder)

The RADF makes the MFP scan document per page automatically or makes the MFP scan both sides of the original depending on the setting.

### (4) System Control Unit

The System Control Unit is a unit which achieves each function by controlling the entire MFP.

#### (5) Printer Unit

The Printer Unit is a unit which receives a print request from the System Controller Unit and prints the print data on the paper.

#### (6) Finisher

The Finisher is a paper exit device which automatically sorts or groups papers which are printed and exited from the MFP.

## (7) HDD (Hard Disk Drive)

The HDD is a general hard disk drive. Not only a part of software that controls the MFP, but also image data and document data is stored, and secured asset data is stored in the encrypted partition.

## (8) FROM (Flash ROM)

The FROM is a nonvolatile memory. A part of software that controls the MFP is stored.

#### (9) NVRAM (NonVolatile RAM)

The NVRAM is a nonvolatile memory. This is a memory device which saves setup values required for controlling the MFP.

## (10) SoC (System on a Chip)

SoC is a LSI in which a device controller circuit is integrated with a microprocessor at the core.

## (11) DRAM (Dynamic Random Access Memory)

The DRAM is a volatile memory. This is a memory which loads and executes a program which controls the MFP.

### (12) NIC (Network Interface Card)

The NIC is a device for network-connection interface. It supports 10Base-T/100Base-TX/Gigabit Ethernet.

## 1.4.2. Guidance

The following are the guidance documents for this TOE. However, the guidance is written in both English and Japanese.

Table 1 English Guidance

## 1.4.3. Logical Boundary

The logical boundary of TOE is defined by the TOE security function and a general function which are described by the following section.

Figure 3 Logical Boundary

#### 1.4.3.1. General Functions

In MFP, a series of function for the office work concerning the image such as copy, print and scan exists as a general function, and TOE performs the core control in the operation of these functions.

### (1) Copy function

A Copy function is a function to read the original with the scanner and print it out from the printer according to the general user's operation from the operation panel.

#### (2) Print function

A print function is a function to receive the print data from the client PC by LAN or USB Interface, and to print it on paper. In addition, The TOE prints the data which received the e-mail and Internet fax.

#### (3) Scan function

A scan function is to preserve scan data in internal HDD and to read the preserved data from HDD, and to tell it to a general user client, mail server or FTP server automatically according to information set to MFP reading original data from the scanner unit by the general user's instruction. A general user can demand this function from the operation panel.

### (4) e-Filing function

The user box is an e-Filing that each user can create. It is suitable for specific users or U.ADMINISTRATOR to store confidential documents. In addition user can operate various functions to the document such as print/edit/manage, etc.

#### (5) Internet Fax function

Internet Fax function is a function that transmits and receives an e-mail with a file in a given format between the TOE and the other internet Fax devices or client computers through the mail server. The document data which was scanned by the TOE is attached to the e-mail and the e-mail is transmitted to the destination e-mail address. The TOE accesses the mail server so as to receive a new e-mail and a document which is attached to the e-mail.

## 1.4.3.2. Security Functions

The security functions provided by the TOE are as follows:

## (1) User Authentication

The TOE has a protected feedback function at password entry and a lockout function for a user who failed the authentication. The TOE prompts the user to enter the User ID and password from the control panel or client PC to execute identity authentication.

## (2) User Access Control

The TOE controls access to the user data and functions that are secured assets to the allowed users.

#### (3) Data Encryption

The TOE encrypts the user's document data which is saved in the internal HDD.

## (4) Audit Data Generation and Review

The TOE generates audit logs for tracking the state of the TOE at any given instance of time. This is done by logging device events (e.g., print/scan job submission; user authentication; authorization etc.) and mapping them to users (based on local or network login) and a reliable timestamp. All logs are available for viewing only to TOE U.AUDITOR and U.ADMINISTRATOR role. The logs can be transferred in network with SSL for viewing and analysis.

## (5) Secure Erase

The TOE removes residual data with DoD secure-erase mechanism before releasing resources from HDD of TOE.

#### (6) Secure Channel

The TOE provides support for SSL and is allowed to secure different protocols such as https. The SSL/TLS functionality also permits the TOE to be securely administered from the Web UI, as well as, being used to secure the connection between the TOE and any other external server. The TOE uses SSL to transfer the print job from the client. IPPs is an IPP print service from the printer driver using SSL. The TOE also prevents data inputted from an external interface from being directly transferred to the shared medium interface without TSF processing.

#### (7) TSF Self Protection

The TOE performs integrity tests on its static executables and configuration files using verification of their digital signatures against the known TOSHIBA signatures. This allows the TOE to detect any tampering of its trusted state.

#### (8) TSF Data Protection

Only an administrator role user has the capability to manage the configuration and enable/disable available services and protocols. U.ADMINISTRATOR can modify the TSF data.

## 1.5. Entity Definitions

#### 1.5.1. Users

Users are entities that interact with the TOE and are external to the TOE. There are five types of Users: Normal Administrator, Auditor, and Internet Fax operator.

Designation	Definition
U.USER	Any authorized User.
U.NORMAL	A User who is authorized to perform User Document Data processing functions of the TOE. A user who has the roles for CopyOperator, Print, PrintOperator, ScanOperator, Fax, ColorPrintCopyOperator, e-FilingOperator, and User out of the Allocation Roles.
U.ADMINISTRATOR	A User who has been specifically granted the authority to manage some portion or all of the TOE and whose actions may affect the TOE security policy (TSP). Administrators may possess special privileges that provide capabilities to override portions of the TSP. A user who has the Administrator Role out of the Allocation Roles or has the Built-in Administrator Account.
U.ACCOUNTMANAGER	A specially-authorized user who can control the user information. A user who has the AccountManager Role out of the Allocation Roles.
U.AUDITOR	A Special user entitled to view and data mine all MFP logs (job, event, etc.). A user who has the Auditor Role out of the Allocation Role.
U.FAXOPERATOR	A specially-authorized user who can send user documents and print received data using the Internet Fax functions. A user who has the FaxOperator Role out of the Allocation Roles.

Table 3 Users

## 1.5.2. Objects (Assets)

Objects are passive entities in the TOE, that contain or receive information, and upon which Subjects perform Operations. In this ST, Objects are equivalent to TOE Assets. There are three types of Objects: User Data, TSF Data, and Functions.

## 1.5.2.1. User Data

User Data are data created by and for Users and do not affect the operation of the TOE Security Functionality (TSF). This type of data is composed of two objects: User Document Data and User Function Data.

Table 4 User Data

Designation	Definition	Details
D.DOC	User Document Data consist of the information	Copy Documents data
	contained in a user's document. This includes the	Print Documents data
	original document itself in any of hardcopy,	Scan Documents data
	electronic form, image data, or residually stored data	e-Filing Documents data except
	created by the hardcopy device while processing an	stored in Public Folder
	original document and printed hardcopy output.	Residual data after deleting Jobs
D.FUNC	User Function Data are the information about a	Print Hold Queues
	user's document or job to be processed by the TOE.	Address Book data

## 1.5.2.2. TSF Data

TSF Data are data created by and for the TOE and that might affect the operation of the TOE. This type of data is composed of two objects: TSF Protected Data and TSF Confidential Data.

Table 5 TSF Data

Designation	Definition	Details
D.PROT	TSF Protected Data are assets for which alteration by a	ACL Information
	User who is neither an Administrator nor the owner of	Device Security Setting for
	the data would have an effect on the operational security	system
	of the TOE, but for which disclosure is acceptable.	
D.CONF	TSF Confidential Data are an asset for which either	HDD Encryption key
	disclosure or alteration by a user who is neither an	Job Log
	Administrator nor the owner of the data would have an	Message Log
	effect on the operational security of the TOE.	User Password

## **1.5.2.3.** Functions

Functions perform processing, storage, and transmission of data that may be present in TOE. These functions are used by SFR Packages and are identified and defined in Chapter 6.2.

## 1.5.3. Operations

Operations are a specific type of actions performed by a Subject on an Object. In this Security Target, six types of operations are considered: those that result in disclosure of information (**Read**), those that result in alteration of information (**Create**, **Modify**, **Delete**), those that invoke a function (**Execute**), those that result in transfers to outside (**Export**).

## 1.5.4. Channels

Channels are the mechanisms through which data can be transferred into and out of the TOE. In this Security Target, four types of Channels are allowed.

#### (1) Private-medium Interface

The TOE has Operator Panel and USB interfaces.

### (2) Shared-medium Interface

The TOE is connected with the internal network accessed by multiple Users.

## (3) Original Document Handler

Mechanisms for transferring User Document Data into the TOE in hardcopy form. It is an input channel.

## (4) Hardcopy Output Handler

Mechanisms for transferring User Document Data out of the TOE in hardcopy form. It is an output channel. In practice, at least one input channel and one output channel would be present in any TOE configuration, and at least one of those channels would be either an Original Document Handler or a Hardcopy Output Handler.

## 1.5.5. Terminology

Table 6 defines the meaning of certain terms.

Table 6 Terminology

User Password User's password to log into the TOE. User Token User's password to log into the TOE. User Token User's password to log into the TOE. User Token User User Token User User User User User User User User	Terminology	Definition
User Password User Password to User's password to log into the TOE.  User Token The User Token is required to use the security function (SSDK), and is generated and managed within the SSDK. The User Token is used to check access to objects.  ACL information ACL information defines the MFP functions that are permitted for use per Permission Role.  Job Log The job information such as Print Job, Transmission Journals, Reception Journals and Scan Job Message Log Log regarding MFPs device information or operations executed by users.  Cryptography, security settings and network settings.  System HDD Encryption Key An encryption key which is used for encryption/decryption of the HDD data. The key data is stored in the FROM.  TopAccess A web-based job and device control tool. The MFP information can be retrieved by using this tool through network.  e-Filling Box peration can be also performed through network.  e-Filling Box peration can be also performed through network.  e-Filling Box Password A password to access e-Filling.  Primt Hold Queue A queue to which a print job waiting for printing is saved temporarily.  Permission An access right to each operation which is given to the Role.  Address Book A function which controls the email address information.  Count Clear Time Time to log out when the logged in user does not operate the MFP for a certain period of time.  Count Clear Time Time to log out when the logged in user does not operate the MFP for a certain period of time.  Count Clear Time Time to log out when the logged in user does not operate the MFP for a certain period of time.  Count Clear Time Time to log out when the logged in user does not operate the MFP for a certain period of time.  Count Clear Time Time to log out when the logged in user does not operate the MFP for a certain period of time.  Count Clear Time Time to log out when the logged in user does not operate the MFP for a certain period of time. that shows a role which shows the use of the MFP function.		that shows a role which shows the use of the MFP function.

Terminology	Definition
Administrator Role	The Administrator Role has the following authority.
	· Authority to use e-Filing Box function.
	· Authority to manage the MFP device setting.
	· Authority to perform the User and Department management setting.
	· Authority to execute query, export and clear in the audit log.
AccountManager Role	A role which has an authority to perform User management setting.
Auditor Role	A role which has an authority to browse the audit log.
CopyOperator Role	A role which has an authority to use Copy.
ScanOperator Role	The ScanOperator Role has the following authority.
	<ul> <li>Authority to save a scanned or copied image in the USB Storage Device.</li> </ul>
	Authority to send a scanned image or an image in the e-Filing Box via email.
	<ul> <li>Authority to save a scanned or copied image in an external server, such as the FTP server.</li> </ul>
Print Role	A role which has an authority to use the function to print from the client PC connected to the LAN or USB-I/F.
PrintOperator Role	A role which has an authority to print/delete a Print JOB in the Print Hold Queue.
e-FilingOperator Role	A role which has an authority to use e-Filing function.
Fax Role	A role which has an authority to use the transmission functions of Internet Fax.
FaxOperator Role	A role which has an authority to use the transmission function of Internet
	Fax and to print the data automatically received via Internet Fax in the
	Print Hold Queue.
Built-in Administrator Account	An Administrator account which is registered to the MFP beforehand.
User Role	A general user role which can use Print, Scan, Copy, e-Filing, and
	Internet fax transmission functions.
ColorPrintCopyOperator Role	A role which has an authority to use color print and color copy in addition
	to CopyOperator Role Role and Print Role authorities.

## 1.6. Trademarks

- · The official name of Windows XP is Microsoft Windows XP Operating System.
- · The official name of Windows Vista is Microsoft Windows Vista Operating System.
- Microsoft, Windows and the brand names and product names of other Microsoft products are trademarks of Microsoft Corporation in the US and other countries.
- · TopAccess is a trademark of Toshiba Tec Corporation.
- · Other company and product names given in this manual or displayed in this software may be the trademarks of their respective companies.

## 2. CONFORMANCE CLAIM

## 2.1. CC Conformance Claim

The ST and TOE are conformant to the following CC specifications:

Common Criteria version: Version 3.1 Release 3

Part 1: Introduction and general model July 2009 Version 3.1 Revision 3 Final Part 2: Security functional components July 2009 Version 3.1 Revision 3 Final Part 3: Security assurance components July 2009 Version 3.1 Revision 3 Final

ST conformance for CC part2: CC part2 Extend

ST conformance for CC part3: CC part3 Conformant

## 2.2. PP conformance Claim, Package conformance Claim

### 2.2.1. PP conformance Claim

The ST conforms to following PP.

PP Identification: IEEE Std 2600.1-2009

PP Registration: CCEVS-VR-VID10340-2009

PP Version: 1.0

Date: June 2009

### 2.2.2. Package conformance Claim

This ST conforms to Common Criteria Evaluation Assurance Level (EAL) 3 augmented by ALC\_FLR.2. SFR Packages conform to PP are as follows.

2600.1-PRT, SFR Package for Hardcopy Device Print Functions, Operational Environment A (Package Version 1.0, dated June 2009)

2600.1-SCN, SFR Package for Hardcopy Device Scan Functions, Operational Environment A (Package Version 1.0, dated June 2009)

2600.1-CPY, SFR Package for Hardcopy Device Copy Functions, Operational Environment A (Package Version 1.0, dated June 2009)

2600.1-DSR, SFR Package for Hardcopy Device Document Storage and Retrieval Functions, Operational Environment A (Package Version 1.0, dated June 2009)

2600.1-SMI, SFR Package for Hardcopy Device Shared-medium Interface Functions, Operational Environment A (Package Version 1.0, dated June 2009)

## 2.3. Conformance Rationale

## 2.3.1. **TOE** type

TOE is Multifunction Peripheral (MFP) that includes the entire hardware and software components. The TOE provides the printing, scanning, copying, is intended to be used for the Operation Environment A defined in IEEE Std 2600.1. These are described in Chapter 1, 1.3.2 and 1.4 in the ST. Therefore TOE type is equivalent as that of defined in IEEE Std 2600.1.

#### 2.3.2. ST Conformance

The ST conforms to IEEE Std 2600.1 with demonstrate that it is equivalent or more restrictive than the PP which is claiming demonstrable conformance.

This TOE states the SAR which conforms to EAL3 augmented by ALC\_FLR.2 in the ST as requested by PP as for the SAR which is prescribed by PP.

This is explained in more detail as follows:

#### 2.3.2.1. Security Problem Definition

Threat Agents and Threats, Assumptions, and Organizational Security Policies (OSPs) in the ST's environment are more restrictive than those defined in the IEEE Std 2600.1.

The ST's Security Problem Definition described in Chapter 3 is the one to which P.CRYPTOGRAPHY is added to PP's Security Problem Definition. As mentioned in Section 2.3.2.2, the security objectives of ST is more restrictive than those of PP. Therefore, ST's Security Problem Definition is more restrictive than PP's Security Problem Definition because all TOE which satisfies ST's Security Problem Definition satisfies PP's Security Problem Definition, and all operational environments which satisfy PP's Security Problem Definition.

### 2.3.2.2. Security Objectives

Security Objectives for the TOE and its environment in the ST are more restrictive than those defined in the IEEE Std 2600.1. Because the ST's security objectives for the TOE include all PP's security objectives for the TOE, O.AUDIT\_STORAGE\_PROTECTED, O.AUDIT\_ACCESS\_AUTHORIZED, and O.CRYPTOGRAPHY in the ST's security objectives for the TOE described in Chapter 4, the TOE described in the ST satisfies PP's security objectives for the TOE. Because the security objectives for the operational environment in PP includes all objectives of the operational environments in the ST, OE.AUDIT\_STRAGE.PROTECTED, and OE.AUDIT\_ACCESS.AUTHORIZED, all operational environments which satisfy the security objectives for the operational environment in PP satisfy the security objectives for the operational environment in this ST. Thus, ST's security objectives are more restrictive than PP's.

## 2.3.2.3. Extended Components Definitions

The extension component definition of the ST is the same as the extension component definition of PP because the extension component definition of the ST described in Chapter 5 refers to the definition of PP as it is.

## **2.3.2.4.** SFR Components Definitions

This TOE selects the SFR described in "10.Common Security Functional Requirements (APE\_REQ)" of PP and 2600.1-PRT, 2600.1-SCN, 2600.1-DSR, 2600.1-SMI as the SFR Package.

Some SFRs are added to the statement of ST on account of restricting the capability of the TOE to address the Objectives. These SFRs do not weaken the SFRs which defined in the IEEE Std 2600.1.

Also, because additional SFRs to PP are described as stated in 2.3.2.6, it is more restrictive.

### 2.3.2.5. SFR Components in SFR Package Definitions

All SFRs components defined in SFR package are described in the ST as shown below, therefore the ST conform with SFR package.

SFR Package	Definition							
PRT	PRT, CPY, SCN, DSR access control SFP are represented as TOE access							
SCN	control SFP at FDP_ACC.1(a) and FDP_ACF.1(a).							
CPY								
DSR								
SMI	FPT_FDI_EXP.1 and FTP_ITC.1 which required in IEEE Std 2600.1 are							
	represented in the ST and these SFRs relevant auditable events are generated							
	by FAU GEN.1 in the ST.							

Table 7 Definition of the SFR Package

## 2.3.2.6. Conformance claim rationale

FAU\_STG.1, FAU\_STG.4, FAU\_SAR.1, and FAU\_SAR.2 are added according to PP APPLICATION NOTE7 so that the TOE maintains and manages the audit log. FIA\_AFL.1, FIA\_UAU.7, and FIA\_SOS.1 are added according to PP APPLICATION NOTE36 so that the TOE performs authentication. FCS\_COP.1 are added according to the organizational security policies, P. CRYPTGRAPHY. Although FMT\_MOF.1 is added in order to control behavior of the security function, this addition does not damage the SFR requirements prescribed in PP.

## 3. SECURITY PROBLEM DEFINITION

## 3.1. Threats agents

This security problem definition addresses threats posed by four categories of threat agents:

- a) Persons who are not permitted to use the TOE who may attempt to use the TOE.
- b) Persons who are authorized to use the TOE who may attempt to use TOE functions for which they are not authorized.
- c) Persons who are authorized to use the TOE who may attempt to access data in ways for which they are not authorized.
- d) Persons who unintentionally cause a software malfunction that may expose the TOE to unanticipated threats.

The threats and policies defined in this ST address the threats posed by these threat agents.

### 3.2. Threats to TOE Assets

The threats identified in the following Table sections are addressed by the TOE and/or Operating Environment.

Table 8 Threat to User Data for the TOE

Threat	Affected Asset	Description						
T.DOC.DIS	D.DOC	User Document Data may be disclosed to unauthorized persons						
T.DOC.ALT	D.DOC	User Document Data may be altered by unauthorized persons						
T.FUNC.ALT	D.FUNC	User Function Data may be altered by unauthorized persons						

Table 9 Threats to TSF Data for the TOE

Threat	Affected Asset	Description
T.PROT.ALT	D.PROT	TSF Protected Data may be altered by unauthorized persons
T.CONF.DIS	D.CONF	TSF Confidential Data may be disclosed to unauthorized persons
T.CONF.ALT	D.CONF	TSF Confidential Data may be altered by unauthorized persons

## 3.3. Organizational Security Policies for the TOE

This section describes the Organizational Security Policies (OSPs) that apply to the TOE. OSPs are used to provide a basis for security objectives that are commonly desired by TOE Owners in this operational environment but for which it is not practical to universally define the assets being protected or the threats to those assets.

Table 10 Organizational Security Policies for the TOE

Name	Description			
P.USER.AUTHORIZATION	To preserve operational accountability and security, Users will be			
	authorized to use the TOE only as permitted by the TOE Owner.			
P.SOFTWARE.VERIFICATION	To detect malfunction of the TOE, procedures will exist to			
	self-verify executable code in the TOE.			
P.AUDIT.LOGGING	To preserve operational accountability and security, records that			
	provide an audit trail of TOE use and security-relevant events will			
	be created, maintained, and protected from unauthorized			
	disclosure or alteration, and will be reviewed by authorized			
	personnel.			
P.INTERFACE.MANAGEMENT	To prevent unauthorized use of the external interfaces of the TOE,			
	operation of those interfaces will be controlled by the TOE and its			
	IT environment.			
P.CRYPTOGRAPHY	User document data stored in an HDD must be encrypted to			
	improve the secrecy of the document.			

## 3.4. Assumptions

The Security Objectives and Security Functional Requirements defined in subsequent sections of this ST are based on the condition that all of the assumptions described in this section are satisfied.

Table 11 Assumptions for the TOE

Assumption	Description
A.ACCESS.MANAGED	The TOE is located in a restricted or monitored environment that
	provides protection from unmanaged access to the physical
	components and data interfaces of the TOE.
A.USER.TRAINING	TOE Users are aware of the security policies and procedures of
	their organization, and are trained and competent to follow those
	policies and procedures.
A.ADMIN.TRAINING	Administrators are aware of the security policies and procedures
	of their organization, are trained and competent to follow the
	manufacturer's guidance and documentation, and correctly
	configure and operate the TOE in accordance with those policies
	and procedures.
A.ADMIN.TRUST	Administrators do not use their privileged access rights for
	malicious purposes.

# 4. SECURITY OBJECTIVES

This section describes the security objectives that the TOE shall fulfill.

## 4.1. Security Objectives for the TOE

Table 12 shows the security objectives which include all security objectives for the TOE described in PP and in which O.AUDIT\_STORAGE.PROTECTED, O.AUDIT\_ACCESS.AUTHORIZED, and O.CRYPTOGRAPHY are added to.

Table 12 Security Objectives for the TOE

Objective	Definition				
O.DOC.NO_DIS	The TOE shall protect User Document Data from unauthorized				
	disclosure.				
O.DOC.NO_ALT	The TOE shall protect User Document Data from unauthorized				
	alteration.				
O.FUNC.NO_ALT	The TOE shall protect User Function Data from unauthorized				
	alteration.				
O.PROT.NO_ALT	The TOE shall protect TSF Protected Data from unauthorized				
	alteration.				
O.CONF.NO_DIS	The TOE shall protect TSF Confidential Data from unauthorized				
	disclosure.				
O.CONF.NO_ALT	The TOE shall protect TSF Confidential Data from unauthorized				
	alteration.				
O.USER.AUTHORIZED	The TOE shall require identification and authentication of Users, and				
	shall ensure that Users are authorized in accordance with security				
	policies before allowing them to use the TOE.				
O.INTERFACE.MANAGED	The TOE shall manage the operation of external interfaces in				
	accordance with security policies.				
O.SOFTWARE.VERIFIED	The TOE shall provide procedures to self-verify executable code in				
	the TSF.				
O.AUDIT.LOGGED	The TOE shall create and maintain a log of TOE use and				
	security-relevant events, and prevent its unauthorized disclosure or				
	alteration.				
O.AUDIT_STORAGE.PROTECTED	The TOE shall ensure that audit records are protected from				
	unauthorized access, deletion and modifications.				
O.AUDIT_ACCESS.AUTHORIZED	The TOE shall ensure that audit records can be accessed in order to				
	detect potential security violations, and only by authorized persons.				
O.CRYPTOGRAPHY	TOE shall encrypt it at the time of storing the user document data to				
	an HDD.				

## 4.2. Security Objectives for the Operational environment

This section describes the security objectives that must be fulfilled by the methods in the operational environment for the TOE. Refer to the objectives for the operational environment in IEEE Std 2600.1.

Table 13 Security Objectives for Operational environment

Objective	Definition				
OE.PHYSICAL.MANAGED	The TOE shall be placed in a secure or monitored area that				
	provides protection from unmanaged physical access to the TOE.				
OE.INTERFACE.MANAGED	The IT environment shall provide protection from unmanaged				
	access to TOE external interfaces.				
OE.USER.AUTHORIZED	The TOE Owner shall grant permission to Users to be authorized to				
	use the TOE according to the security policies and procedures of				
	their organization.				
OE.USER.TRAINED	The TOE Owner shall ensure that Users are aware of the security				
	policies and procedures of their organization, and have the training				
	and competence to follow those policies and procedures.				
OE.ADMIN.TRAINED	The TOE Owner shall ensure that TOE Administrators are aware of				
	the security policies and procedures of their organization, have the				

Objective	Definition					
	training, competence, and time to follow the manufacturer's					
	guidance and documentation, and correctly configure and operate					
	the TOE in accordance with those policies and procedures.					
OE.ADMIN.TRUSTED	The TOE Owner shall establish trust that TOE Administrators will					
	not use their privileged access rights for malicious purposes.					
OE.AUDIT.REVIEWED	The TOE Owner shall ensure that audit logs are reviewed at					
	appropriate intervals for security violations or unusual patterns of					
	activity.					

## 4.3. Security Objectives rationale

This section demonstrates that each threat, organizational security policy, and assumption are mitigated by at least one security objective for the TOE (Refer to the Completeness of security objectives) and that those security objectives counter the threats, enforce the policies, and uphold the assumptions. (Refer to the Sufficiency of security objectives). Table 14 shows the completeness of Security Objectives and Table 15 shows the Sufficiency of the objectives.

**Table 14** Completeness of Security Objectives

		Objectives																		
Threats. Policies, and Assumptions	O.DOC.NO_DIS	O.DOC.NO_ALT	O.FUNC.NO_ALT	O.PROT.NO_ALT	O.CONF.NO_DIS	O.CONF.NO_ALT	O.USER.AUTHORIZED	OE.USER.AUTHORIZED	O.SOFTWARE.VERIFIED	O.AUDIT.LOGGED	O.AUDIT_STORAGE.PROTECTED	O.AUDIT_ACCESS.AUTHORIZED	OE.AUDIT.REVIEWED	O.INTERFACE.MANAGED	OE.PHYISCAL.MANAGED	OE.INTERFACE.MANAGED	OE.ADMIN.TRAINED	OE.ADMIN.TRUSTED	OE.USER.TRAINED	O.CRYPTOGRAPHY

Table 15 Sufficiency of Security Objectives

Threats. Policies, and assumptions	Summary	Objectives and rationale					
T.DOC.DIS	User Document Data may be disclosed to unauthorized persons.	O.DOC.NO_DIS protects D.DOC from unauthorized disclosure.  O.USER.AUTHORIZED establishes user identification and authentication as the basis for authorization.  OE.USER.AUTHORIZED establishes responsibility of the TOE Owner to					
T.DOC.ALT	User Document Data may be altered by unauthorized persons.	appropriately grant authorization.  O.DOC.NO_ALT protects D.DOC from unauthorized alteration.  O.USER.AUTHORIZED establishes user identification and authentication as the basis for authorization.  OE.USER.AUTHORIZED establishes responsibility of the TOE Owner to appropriately grant authorization.					
T.FUNC.ALT	User Function Data may be altered by unauthorized persons.	O.FUNC.NO_ALT protects D.FUNC from unauthorized alteration. O.USER.AUTHORIZED establishes user identification and authentication as the basis for authorization. OE.USER.AUTHORIZED establishes responsibility of the TOE Owner to appropriately grant authorization.					
T.PROT.ALT	TSF Protected Data may be altered by unauthorized persons.	O.PROT.NO_ALT protects D.PROT from unauthorized alteration.  O.USER.AUTHORIZED establishes user identification and authentication as the basis for authorization.  OE.USER.AUTHORIZED establishes responsibility of the TOE Owner to appropriately grant authorization.					
T.CONF.DIS	TSF Confidential Data may be disclosed to unauthorized persons.	O.CONF.NO_DIS protects D.CONF from unauthorized disclosure. O.USER.AUTHORIZED establishes user identification and authentication as the basis for authorization. OE.USER.AUTHORIZED establishes responsibility of the TOE Owner to appropriately grant authorization.					
T.CONF.ALT	TSF Confidential Data may be altered by unauthorized persons.	O.CONF.NO_ALT protects D.CONF from unauthorized alteration.  O.USER.AUTHORIZED establishes user identification and authentication as the basis for authorization.  OE.USER.AUTHORIZED establishes responsibility of the TOE Owner to appropriately grant authorization.					
P.USER.AUTHORIZATION	Users will be authorized to use the TOE.	O.USER.AUTHORIZED establishes user identification and authentication as the basis for authorization to use the TOE.  OE.USER.AUTHORIZED establishes responsibility of the TOE Owner to appropriately grant authorization.					

Threats. Policies, and	Summary						
assumptions	, and the second	Objectives and rationale					
P.SOFTWARE.VERIFICATION  P.AUDIT.LOGGING	Procedures will exist to self-verify executable code in the TSF.  An audit trail of TOE use and security-relevant events will be created, maintained, protected, and reviewed.	O.SOFTWARE.VERIFIED provides procedures to self-verify executable code in the TSF.  O.AUDIT.LOGGED creates and maintains a log of TOE use and security-relevant events, and prevents unauthorized disclosure or alteration.  O.AUDIT_STORAGE.PROTECTED protects audit records from unauthorized access, deletion and modifications.  O.AUDIT_ACCESS.AUTHORIZED provides audit records accessed in order to detect potential security violation, and only by authorized persons.  OE.AUDIT.REVIEWED establishes responsibility of the TOE Owner to ensure that audit logs are appropriately reviewed.					
P.INTERFACE.MANAGEMENT	Operation of external interfaces will be controlled by the TOE and its IT environment.	O.INTERFACE.MANAGED manages the operation of external interfaces in accordance with security policies.  OE.INTERFACE.MANAGED establishes a protected environment for TOE external interfaces.					
P.CRYPTOGRAPHY	Cryptographic operation will be controlled by TOE.	O.CRYPTOGRAPHY encrypts D.DOC stored in HDD by TOE.					
A.ACCESS.MANAGED	The TOE environment provides protection from unmanaged access to the physical components and data interfaces of the TOE.	OE.PHYSICAL.MANAGED establishes a protected physical environment for the TOE.					
A.ADMIN.TRAINING	TOE Users are aware of and trained to follow security policies and procedures	OE.ADMIN.TRAINED establishes responsibility of the TOE Owner to provide appropriate Administrator training.					
A.ADMIN.TRUST	Administrators do not use their privileged access rights for malicious purposes.	OE.ADMIN.TRUSTED establishes responsibility of the TOE Owner to have a trusted relationship with Administrators.					
A.USER.TRAINING	Administrators are aware of and trained to follow security policies and procedures.	OE.USER.TRAINED establishes responsibility of the TOE Owner to provide appropriate User training.					

## 5. EXTENDED COMPONENTS DEFINITION

This ST defines components that are extensions to Common Criteria 3.1 Revision 3, Part 2. This ST defines the extended component quoting a description of the Protection Profile.

## FPT\_FDI\_EXP Restricted forwarding of data to external interfaces

#### Family behaviour:

This family defines requirements for the TSF to restrict direct forwarding of information from one external interface to another external interface.

Many products receive information on specific external interfaces and are intended to transform and process this information before it is transmitted on another external interface. However, some products may provide the capability for attackers to misuse external interfaces to violate the security of the TOE or devices that are connected to the TOE's external interfaces. Therefore, direct forwarding of unprocessed data between different external interfaces is forbidden unless explicitly allowed by an authorized administrative role. The family FPT\_FDI\_EXP has been defined to specify this kind of functionality.

## **Component leveling:**

FPT\_FDI\_EXP.1 Restricted forwarding of data to external interfaces provides for the functionality to require TSF controlled processing of data received over defined external interfaces before these data are sent out on another external interface. Direct forwarding of data from one external interface to another one requires explicit allowance by an authorized administrative role.

### Management: FPT\_FDI\_EXP.1

The following actions could be considered for the management functions in FMT:

- a) Definition of the role(s) that are allowed to perform the management activities
- b) Management of the conditions under which direct forwarding can be allowed by an administrative role
- c) Revocation of such an allowance

## Audit: FPT\_FDI\_EXP.1

The following actions should be auditable if FAU\_GEN Security Audit Data Generation is included in the PP/ST:

There are no auditable events foreseen.

## **Rationale:**

Quite often, a TOE is supposed to perform specific checks and process data received on one external interface before such (processed) data are allowed to be transferred to another external interface. Examples are firewall systems but also other systems that require a specific work flow for the incoming data before it can be transferred. Direct forwarding of such data (i.e., without processing the data first) between different external interfaces is therefore a function that—if allowed at all—can only be allowed by an authorized role.

It has been viewed as useful to have this functionality as a single component that allows specifying the property to disallow direct forwarding and require that only an authorized role can allow this. Since this is a function that is quite common for a number of products, it has been viewed as useful to define an extended component.

The Common Criteria defines attribute-based control of user data flow in its FDP class. However, in this Protection Profile, the authors needed to express the control of both user data and TSF data flow using administrative control instead of attribute-based control. It was found that using FDP\_IFF and FDP\_IFC for this purpose resulted in SFRs that were either too implementation-specific for a Protection Profile or too unwieldy for refinement in a Security Target. Therefore, the authors decided to define an extended component to address

this functionality.

This extended component protects both user data and TSF data, and it could therefore be placed in either the FDP or the FPT class. Since its purpose is to protect the TOE from misuse, the authors believed that it was most appropriate to place it in the FPT class. It did not fit well in any of the existing families in either class, and this led the authors to define a new family with just one member.

FPT\_FDI\_EXP.1 Restricted forwarding of data to external interfaces

**Hierarchical to:** No other components

**Dependencies:** FMT\_SMF.1 Specification of Management Functions

FMT\_SMR.1 Security roles

FPT\_FDI\_EXP.1.1 The TSF shall provide the capability to restrict data received on [assignment: list of

external interfaces] from being forwarded without further processing by the TSF to

[assignment: list of external interfaces].

# 6. SECURITY REQUIREMENTS

## 6.1. Security Functional Requirements

The security functional requirements are given in detail in the following subsections. These requirements are verbatim from IEEE Std 2600.1 Protection Profile A with appropriate selection or assignments provided. The following Table summarizes the security functional requirements claimed.

#### 6.1.1. Class FAU: Security audit

(1) FAU\_GEN.1 Audit data generation

Hierarchical to: No other components

Dependencies: FPT\_STM.1 Reliable time stamps

**FAU\_GEN.1.1** The TSF shall be able to generate an audit record of the following auditable events:

- Start-up and shutdown of the audit functions; and

- All auditable events for the [selection, choose one of: minimum, basic, detailed, not specified] level of audit; and
- All auditable Events as each is defined for its Audit Level (if one is specified) for the Relevant SFR in Table 16; [assignment: other specifically defined auditable events]

[selection, choose one of: minimum, basic, detailed, not specified]

- not specified

[assignment: other specifically defined auditable events]

- none

**FAU\_GEN.1.2** The TSF shall record within each audit record at least the following information:

- Date and time of the event, type of event, subject identity (if applicable), and the outcome (success or failure) of the event; and
- For each audit event type, based on the auditable event definitions of the functional components included in the PP/ST, for each Relevant SFR listed in Table 16:(1) information as defined by its Audit Level (if one is specified), and (2) all Additional Information (if any is required); [assignment: other audit relevant information]

[assignment: other audit relevant information]

- none

**Table 16 Audit Data Requirements** 

Auditable event	Relevant SFR	Audit level	Additional information	Details (Actual event names)
None	FAU_SAR.1	Minimum	None required	None
None	FAU_SAR.2	Minimum	None required	None
None	FAU_STG.1	Minimum	None required	None
None	FAU_STG.4	Minimum	None required	None
None	FAU_GEN.1	Minimum	None required	None
None	FAU_GEN.2	Minimum	None required	None
Success and failure, and the type of cryptographic operation	FCS_COP.1	Minimum	None required	· Success of encryption · Failure of encryption · Success of decryption · Failure of decryption
None	FDP_ACC.1(a)	Minimum	None required	None
None	FDP_ACC.1(b)	Minimum	None required	None

A 31/ 33	D.I. (CED	A 12/1 1	Additional	Details
Auditable event	Relevant SFR	Audit level	information	(Actual event names)
Auditable event  Job completion	Relevant SFR  FDP_ACF.1(a)  FDP_ACF.1(b)	Audit level  Not specified		(Actual event names)  · Success of the reading demand of D.DOC  · Success of the deletion demand of D.DOC  · Success of the modify demand of D.FUNC  · Success of the deletion demand of D.FUNC  · Termination of job  · Success of the modify demand of D.DOC  · Success of the Print function demand  · Success of the Scan function demand  · Success of the Copy function
				demand Success of e-Filing function demand Termination of job
None	FDP_RIP.1	Minimum	None required	None
Both successful and unsuccessful use of the user authentication mechanism	FIA_UAU.1	Basic	None required	Failure of login (Failure of the password verification)     Success of login (Success of password verification)
None	FIA_UAU.7	Minimum	None required	None
Both successful and unsuccessful use of the identification mechanism	FIA_UID.1	Basic	Attempted user identity, if available	<ul> <li>Success of login (Success of the User ID verification)</li> <li>Failure of login (Failure of the User ID verification)</li> </ul>
The reaching of the threshold for the unsuccessful user authentication attempts and the actions (e.g. disabling of a terminal) taken and the subsequent, if appropriate, restoration to the normal state (e.g. re-enabling of a terminal)	FIA_AFL.1	Minimum	None required	· Login refusal by the certification trial number of times over · Release of login denied
None	FIA_ATD.1	Minimum	None required	None
Rejection by the TSF of any tested secret	FIA_SOS.1	Minimum	None required	Failure of the login password modify
Unsuccessful binding of user security attributes to a subject (e.g. creation of a subject).	FIA_USB.1	Minimum	None required	Failure of binding User Token

Auditable event	Relevant SFR	Audit level	Additional information	Details (Actual event names)
None	FMT MTD.1	Minimum	None required	None
Use of the management functions	FMT_SMF.1	Minimum	None required	Use of the management functions
Modifications to the group of users that are part of a role	FMT_SMR.1	Minimum	None required	None (They will not be modified.)
None	FMT_MSA.1(a)	Minimum	None required	None
None	FMT_MSA.1(b)	Minimum	None required	None
None	FMT_MSA.3(a)	Minimum	None required	None
None	FMT_MSA.3(b)	Minimum	None required	None
None	FMT_MOF.1	Minimum	None required	None
Changes to the time	FPT_STM.1	Minimum	None required	Modify the time
None	FPT TST.1	Minimum	None required	None
None	FPT_FDI_EXP.1	Minimum	None required	None
Termination of an interactive session by the session locking mechanism	FTA_SSL.3	Minimum	None required	Termination of session due to time limit
<ul><li>a) Failure of the trusted channel functions</li><li>b) Identification of the initiator and target of failed trusted channel functions</li></ul>	FTP_ITC.1	Minimum	None required	• Failure of SSL comunication • Identification of the initiator and target of failed SSL communication

(2) FAU\_GEN.2 User identity association

Hierarchical to: No other components.

Dependencies: FAU\_GEN.1 Audit data generation FIA\_UID.1 Timing of identification

**FAU\_GEN.2.1** For audit events resulting from actions of identified users, the TSF shall be able to

associate each auditable event with the identity of the user that caused the event.

(3) FAU\_SAR.1 Audit review

Hierarchical to: No other components.

Dependencies: FAU\_GEN.1 Audit data generation

FAU\_SAR.1.1 The TSF shall provide [assignment: authorised users] with the capability to read

[assignment: list of audit information] from the audit records.

[assignment: authorised users]

- refer to Table 17

[assignment: list of audit information]

- refer to Table 17

#### **Table 17 List of Audit Information**

<b>Authorised Users</b>	Audit Information
U.NORMAL	Job log information which is generated by own job
U.ADMINISTRATOR	All log information
U.ACCOUNTMANAGER	None
U.AUDITOR	All log information
U.FAXOPERATOR	Job log information which is generated by own Internet Fax transmission job

**FAU\_SAR.1.2** The TSF shall provide the audit records in a manner suitable for the user to interpret the

information.

(4) FAU SAR.2 Restricted audit review

Hierarchical to: No other components.

Dependencies: FAU\_SAR.1 Audit review

**FAU\_SAR.2.1** The TSF shall prohibit all users read access to the audit records, except those users that

have been granted explicit read-access.

(5) FAU\_STG.1 Protected audit trail storage

Hierarchical to: No other components.

Dependencies: FAU\_GEN.1 Audit data generation

FAU\_STG.1.1 The TSF shall protect the stored audit records in the audit trail from unauthorised

deletion.

**FAU\_STG.1.2** The TSF shall be able to [selection, choose one of: prevent, detect] unauthorised

modifications to the stored audit records in the audit trail.

[selection, choose one of: prevent, detect]

- prevent

(6) FAU\_STG.4 Prevention of audit data loss

Hierarchical to: FAU STG.3 Action in case of possible audit data loss

Dependencies: FAU\_STG.1 Protected audit trail storage

FAU\_STG.4.1 The TSF shall [selection, choose one of: "ignore audited events", "prevent audited

events, except those taken by the authorised user with special rights", "overwrite the oldest stored audit records"] and [assignment: other actions to be taken in case of audit

storage failure] if the audit trail is full.

[selection, choose one of: "ignore audited events", "prevent audited events, except those taken by the authorised user with special rights", "overwrite the oldest stored audit

records"]

- "overwrite the oldest stored audit records"

[assignment: other actions to be taken in case of audit storage failure]

- none

### 6.1.2. Class FDP: User data protection

The Security Function Policy (SFP) described in Table 18 is referenced by the Class FDP SFRs in this clause.

(1) FDP\_ACC.1(a) Subset access control

Hierarchical to: No other components.

Dependencies: FDP\_ACF.1 Security attribute based access control

FDP\_ACC.1.1(a)

The TSF shall enforce the Access Control SFP in Table 18, Table 19, Table 20, Table 21, and Table 22 on the list of users as subjects, objects, and operations among subjects and objects covered by the Access Control SFP in Table 18, Table 19, Table 20, Table 21, and Table 22.

Table 18 Common Access Control SFP

Object	Function Attribute	Object Attribute	Operation(s)	Subject	Subject Attribute	Access Control Rule
D.DOC	+CPY +PRT +SCN	User ID	Delete	U.NORMAL	User ID	If the User ID matchs, the U.NORMAL is permitted to delete the D.DOC except Internet Fax reception D.DOC.
		None	Delete	U.ADMINIS TRATOR	Role	If the Subject is U.ADMINISTRATOR, operation except deleting Internet Fax reception D.DOC is permitted.
D.FUNC (Address Book)	+SCN +DSR	None	Delete, Modify	U.ADMINIS TRATOR	Role	If the Subject is U.ADMINISTRATOR, operation is permitted.

## Table 19 CPY Access Control SFP

Object	Function Attribute	Object Attribute	Operation(s)	Subject	Subject Attribute	Access Control Rule
D.DOC	+CPY	None	Read	U.NORMAL	None	None

Table 20 PRT Access Control SFP

Object	Function Attribute	Object Attribute	Operation(s)	Subject	Subject Attribute	Access Control Rule
D.DOC	+PRT	User ID	Read	U.NORMAL	User ID	If the User ID does
						not match, operation is denied.
		None	Read	U.FAXOPER ATOR	Role	If the Subject is U.FAXOPERATOR, Internet Fax operation to D.DOC is permitted.
D.FUNC (Print job in Print		User ID	Delete	U.NORMAL	User ID	If the User ID does not match, operation is denied.
Hold Queue)		None	Delete	U.ADMINIS TRATOR	Role	If the Subject is U.ADMINISTRATOR, operation is permitted.
		None	Modify	U.USER	None	Operation of U.USER is denied.
D.FUNC (Internet Fax reception job in Print Hold Queue)		None	Modify, Delete	U.USER	None	Operation of U.USER is denied.

Table 21 SCN Access Control SFP

Object	Function Attribute	Object Attribute	Operation(s)	Subject	Subject Attribute	Access Control Rule
D.DOC	+SCN	User ID	Read	U.NORMAL,	User ID	If the User ID does
			Modify	U.FAXOPER		not match, operation is
				ATOR		denied.

Table 22 DSR Access Control SFP

Object	Function Attribute	Object Attribute	Operation(s)	Subject	Subject Attribute	Access Control Rule
D.DOC	+DSR	e-Filing Box	Read,	U.NORMAL,	e-Filing Box	If e-Filing Box
		password	Delete,	U.ADMINIS	Password	Password does not
			Modify	TRATOR		match, operation is
						denied.
						If the entered e-Filing
						Box Password is that
						of the Built-in
						Administrator
						Account, operation is
						permitted.
		None	Delete	U.ADMINIS	Role	If the Subject is
				TRATOR		U.ADMINISTRATOR,
						operation is permitted.
		None	Read,	U.ADMINIS	User ID	If the User ID is that
			Modify,	TRATOR		of the Built-in
			Delete			Administrator
						Account, operation is
						permitted.

(2) FDP\_ACC.1(b) Subset access control

Hierarchical to: No other components.

Dependencies: FDP\_ACF.1 Security attribute based access control

FDP\_ACC.1.1(b) The TSF shall enforce the TOE Function Access Control SFP on users as subjects, TOE

functions as objects, and the right to use the functions as operations as specified in Table

23.

**Table 23** The TOE Function Access Control SFP

Object (TOE Function)	Object Attribute	Subject	Subject Attribute	Access Control Rule
F.PRT	Permission	U.NORMAL,	Allocation	If an Allocation Role is included in the
	Role	U.FAXOPERATOR	Role	Permission Role of F.PRT, U.NORMAL or
				U.FAXOPERATOR is permitted to execute F.PRT.
F.SCN	Permission	U.NORMAL,	Allocation	If an Allocation Role is included in the
	Role	U.FAXOPERATOR	Role	Permission Role of F.SCN, U.NORMAL or
				U.FAXOPERATOR is permitted to execute F.SCN.
F.CPY	Permission	U.NORMAL	Allocation	If an Allocation Role is included in the
	Role		Role	Permission Role of F.CPY, U.NORMAL is
				permitted to execute F.CPY.
F.DSR	Permission	U.NORMAL	Allocation	If an Allocation Role is included in the
	Role		Role	Permission Role of F.DSR, U.NORMAL is
				permitted to execute F.DSR.

## Leading Innovation >>>

(3) FDP\_ACF.1(a) Security attribute based access control

Hierarchical to: No other components.

Dependencies: FDP\_ACC.1 Subset access control

FMT\_MSA.3 Static attribute initialisation

**FDP\_ACF.1.1(a)** The TSF shall enforce the Access Control SFP in Table 18, Table 19, Table 20, Table 21,

and Table 22 to objects based on the following: the list of users as subjects and objects controlled under the Access Control SFP in Table 18, Table 19, Table 20, Table 21, and Table 22, and for each, the indicated security attributes in Table 18, Table 19, Table 20,

Table 21, and Table 22.

FDP\_ACF.1.2(a) The TSF shall enforce the following rules to determine if an operation among controlled

subjects and controlled objects is allowed: rules specified in the Access Control SFP in Table 18, Table 19, Table 20, Table 21, and Table 22 governing access among controlled users as subjects and controlled objects using controlled operations on controlled objects.

FDP\_ACF.1.3(a) The TSF shall explicitly authorise access of subjects to objects based on the following

additional rules: [assignment: rules, based on security attributes, that explicitly authorize

access of subjects to objects].

[assignment: rules, based on security attributes, that explicitly authorize access of

*subjects to objects*]

- refer to Table 18, Table 19, Table 20, Table 21, and Table 22

FDP\_ACF.1.4(a) The TSF shall explicitly deny access of subjects to objects based on the [assignment:

rules, based on security attributes, that explicitly deny access of subjects to objects].

[assignment: rules, based on security attributes, that explicitly deny access of subjects to

objects]

- none

(4) FDP\_ACF.1(b) Security attribute based access control

**Hierarchical to:** No other components.

Dependencies: FDP\_ACC.1 Subset access control

FMT MSA.3 Static attribute initialisation

FDP\_ACF.1.1(b) The TSF shall enforce the TOE Function Access Control SFP to objects based on the

following: users and [assignment: list of TOE functions and the security attribute(s) used

to determine the TOE Function Access Control SFP].

[assignment: list of TOE functions and the security attribute(s) used to determine the

TOE Function Access Control SFP]

- refer to Table 23

**FDP\_ACF.1.2(b)** The TSF shall enforce the following rules to determine if an operation among controlled

subjects and controlled objects is allowed: [selection: the user is explicitly authorized by U.ADMINISTRATOR to use a function, a user that is authorized to use the TOE is automatically authorized to use the functions [assignment: list of functions], [assignment:

other conditions]].

[selection: the user is explicitly authorized by U.ADMINISTRATOR to use a function, a user that is authorized to use the TOE is automatically authorized to use the functions

[assignment: list of functions], [assignment: other conditions]]

- the user is explicitly authorized by U.ADMINISTRATOR to use a function

FDP\_ACF.1.3(b) The TSF shall explicitly authorise access of subjects to objects based on the following

additional rules: the user acts in the role U.ADMINISTRATOR: [assignment: other rules, based on security attributes, that explicitly authorise access of subjects to objects].

[assignment: other rules, based on security attributes, that explicitly authorise access of subjects to objects]

- none

FDP\_ACF.1.4(b) The TSF shall explicitly deny access of subjects to objects based on the [assignment:

rules based on security attributes that explicitly deny access of subjects to objects].

[assignment: rules based on security attributes that explicitly deny access of subjects to

objects]

- none

(5) FDP\_RIP.1 Subset residual information protection

Hierarchical to: No other components.

Dependencies: No dependencies

FDP\_RIP.1.1 The TSF shall ensure that any previous information content of a resource is made

unavailable upon the [selection: allocation of the resource to, deallocation of the

resource from] the following objects: D.DOC, [assignment: list of objects].

[selection: allocation of the resource to, deallocation of the resource from]

- deallocation of the resource from

[assignment: list of objects]

- none

#### 6.1.3. Class FIA: Identification and authentication

(1) FIA\_ATD.1 User attribute definition

Hierarchical to: No other components.

Dependencies: No dependencies

**FIA\_ATD.1.1** The TSF shall maintain the following list of security attributes belonging to individual

users: [assignment: list of security attributes].

[assignment: list of security attributes]

- User ID

- Allocation Role

- Role

(2) FIA\_UAU.1 Timing of authentication

**Hierarchical to:** No other components

**Dependencies:** FIA\_UID.1 Timing of identification

FIA\_UAU.1.1 The TSF shall allow [assignment: list of TSF-mediated actions that do not conflict with

access-controlled Functions of the TOE] on behalf of the user to be performed before

the user is authenticated.

[assignment: list of TSF-mediated actions that do not conflict with access-controlled

Functions of the TOE

- storing the document data from printer driver

- storing the document data from mail Server

FIA\_UAU.1.2 The TSF shall require each user to be successfully authenticated before allowing any

other TSF-mediated actions on behalf of that user.

(3) FIA\_UAU.7 Protected authentication feedback

Hierarchical to: No other components.

**Dependencies:** FIA\_UAU.1 Timing of authentication

FIA\_UAU.7.1

The TSF shall provide only [assignment: list of feedback] to the user while the

authentication is in progress.

[assignment: list of feedback]

- refer to Table 24

**Table 24** Protected Authentication Feedback

Action	Feedback
Input of the password	Display dummy characters

(4) FIA\_UID.1 Timing of identification

Hierarchical to: No other components Dependencies: No dependencies

FIA\_UID.1.1 The TSF shall allow [assignment: list of TSF-mediated actions that do not conflict with

access-controlled Functions of the TOE] on behalf of the user to be performed before

the user is identified.

[assignment: list of TSF-mediated actions that do not conflict with access-controlled

Functions of the TOE]

- storing the document data from mail Server

FIA\_UID.1.2 The TSF shall require each user to be successfully identified before allowing any other

TSF-mediated actions on behalf of that user.

(5) FIA\_USB.1 User-subject binding

Hierarchical to: No other components

**Dependencies:** FIA\_ATD.1 User attributes definition

**FIA\_USB.1.1** The TSF shall associate the following user security attributes with subjects acting on the

behalf of that user: [assignment: list of user security attributes].

[assignment: list of user security attributes]

- User ID

- Allocation Role

- Role

- e-Filing Box Password

**FIA\_USB.1.2** The TSF shall enforce the following rules on the initial association of user security

attributes with the subjects acting on behalf of users: [assignment: rules for the initial

association of attributes].

[assignment: rules for the initial association of attributes]

- none

FIA\_USB.1.3 The TSF shall enforce the following rules governing changes to the user security

attributes with the subjects acting on behalf of users: [assignment: rules for the changing

of attributes].

[assignment: rules for the changing of attributes]

- none

(6) FIA AFL.1 Authentication failure handling

**Hierarchical to:** No other components.

**Dependencies:** FIA\_UAU.1 Timing of authentication

FIA\_AFL.1.1 The TSF shall detect when [selection: [assignment: positive integer number], an

administrator configurable positive integer within[assignment: range of acceptable values]] unsuccessful authentication attempts occur related to [assignment: list of

authentication events].

[selection: [assignment: positive integer number], an administrator configurable positive integer within[assignment: range of acceptable values]]

- an administrator configurable positive integer within[assignment: range of acceptable values]

[assignment: range of acceptable values]

 $-1 \sim 30$ 

[assignment: list of authentication events]

- user authentication

FIA\_AFL.1.2

When the defined number of unsuccessful authentication attempts has been [selection: *met, surpassed*], the TSF shall [assignment: *list of actions*].

[selection: met, surpassed]

- surpassed

[assignment: list of actions]

- lockout each account in lockout time

- only an administrator can release a lockout account

(7) FIA\_SOS.1 Verification of secrets

Hierarchical to: No other components.

Dependencies: No dependencies.

FIA\_SOS.1.1

The TSF shall provide a mechanism to verify that secrets meet [assignment: a defined

quality metric].

[assignment: a defined quality metric]

Table 25 User Password Policy

User Password	Available Characters	Password Length	Rule
User Password (U.NORMAL)	Numbers :	Min:8 Max:64	• User name is not allowed to be used as a
(U.FAXOPERATOR)	Alphabet: A-Z, a-z  Punctuation: !#()*+, /:;=?@\{ ^	Wax.04	<ul> <li>password.</li> <li>Same password cannot be used successively.</li> <li>User Password is not allowed to use same characters more than 3 times successively in one password.</li> <li>Don't accept the prohibited character string that he/she can set from the TopAccess. (the plural settings are possible).</li> </ul>

	attributes inherit specified values.		change the rule
FMT_MSA.3(b)	a) managing the group of roles that can	None	There is no role
	specify initial values;		that can specify
			initial value.
	b) managing the permissive or restrictive	None	The initial value
	setting of default values for a given access		is fixed and can
	control SFP;		not be changed.
	c) management of rules by which security	None	Nobody can
	attributes inherit specified values.		change the rule.
FMT_SMF.1	There are no management activities foreseen.	None	-

(7) FMT\_SMR.1 Security roles

**Hierarchical to:** No other components

**Dependencies:** FIA\_UID.1 Timing of identification

FMT\_SMR.1.1 The TSF shall maintain the roles U.ADMINISTRATOR, U.NORMAL, [selection:

Nobody, [assignment: the authorised identified roles]].

[selection: Nobody, [assignment: the authorised identified roles]]

- [assignment: the authorised identified roles]

[assignment: the authorised identified roles]

- refer to Table 3

FMT\_SMR.1.2 The TSF shall be able to associate users with roles, except for the role "Nobody" to

which no user shall be associated.

(8) FMT\_MOF.1 Management of security functions behavior

Hierarchical to: No other components.

Dependencies: FMT\_SMR.1 Security roles

FMT\_SMF.1 Specification of Management Functions

FMT\_MOF.1.1 The TSF shall restrict the ability to [selection: determine the behaviour of, disable,

enable, modify the behaviour of] the functions [assignment: list of functions] to

[assignment: the authorised identified roles].

[selection: determine the behaviour of, disable, enable, modify the behaviour of]

[assignment: list of functions]

- refer to Table 35

[assignment: the authorised identified roles]

- refer to Table 35

**Table 35 Administrative Functions** 

Security Function	Behaviour	Role		
Secure Channel	Enable/Disable	U.ADMINISTRATOR		

#### 6.1.5. Class FPT: Protection of the TSF

(1) FPT\_STM.1 Reliable time stamps

Hierarchical to: No other components. Dependencies: No dependencies.

**FPT\_STM.1.1** The TSF shall be able to provide reliable time stamps.

(2) FPT\_TST.1 TSF testing

Hierarchical to: No other components. Dependencies: No dependencies.

FPT\_TST.1.1 The TSF shall run a suite of self tests [selection: during initial start-up, periodically

during normal operation, at the request of the authorised user, at the conditions [assignment: conditions under which self test should occur]] to demonstrate the correct

operation of [selection: [assignment: parts of TSF], the TSF].

[selection: during initial start-up, periodically during normal operation, at the request of the authorised user, at the conditions [assignment: conditions under which self test

should occur]]

- at the request of the authorised user

[selection: [assignment: parts of TSF], the TSF]

- the TSF

FPT\_TST.1.2 The TSF shall provide authorised users with the capability to verify the integrity of

[selection: [assignment: parts of TSF data], TSF data].

[selection: [assignment: parts of TSF data], TSF data]

- [assignment: parts of TSF data]

[assignment: parts of TSF data]

- HDD Encryption Key

FPT\_TST.1.3 The TSF shall provide authorised users with the capability to verify the integrity of

[selection: [assignment: parts of TSF], TSF].

[Selection: [assignment: parts of TSF], TSF]

- [assignment: parts of TSF]

[assignment: parts of TSF]

- stored TSF executable code

#### 6.1.6. Class FTA: TOE access

FTA\_SSL.3 TSF-initiated termination

Hierarchical to: No other components.

Dependencies: No dependencies.

FTA\_SSL.3.1

The TSF shall terminate an interactive session after a [assignment: time interval of user inactivity].

[assignment: time interval of user inactivity]

- Operation Panel: Auto logout time (15 - 150 sec)

- Web brosers or Client Utilities: Auto logout time (5 - 999 min)

#### 6.1.7. Class FCS: Cryptographic support

The following functional requirements are supplemental requirement for PP.

FCS\_COP.1 Cryptographic Operation

Hierarchical to: No other components.

Dependencies: [FDP\_ITC.1 Import of user data without security attributes, or

FDP\_ITC.2 Import of user data with security attributes, or

FCS\_CKM.1 Cryptographic key generation] FCS\_CKM.4 Cryptographic key destruction

FCS\_COP.1.1

The TSF shall perform [assignment: *list of cryptographic operations*] in accordance with a specified cryptographic algorithm [assignment: *cryptographic algorithm*] and cryptographic key sizes [assignment: *cryptographic key sizes*] that meet the following: [assignment: *list of standards*].

[assignment: list of cryptographic operations]

- refer to Table 36

[assignment: cryptographic algorithm]

- refer to Table 36

[assignment: cryptographic key sizes]

- refer to Table 36

[assignment: list of standards]

- refer to Table 36

**Table 36** Cryptographic Operations

Operation	Algorithm	Cryptographic key sizes	Standards
Encrypt D.DOC which is written in the HDD and decrypt D.DOC which is retrieved from the HDD.	AES	128 bit	FIPS PUB 197

#### 6.2. SFR Package functions

The TOE provides the functions which perform processing, storage, and transmission of data. These functions are listed in Table 37.

**Table 37 SFR Package Functions** 

Designation	Definition
F.PRT	<b>Printing</b> : a function in which electronic document input is converted to physical
	document output.
F.SCN	<b>Scanning</b> : a function in which physical document input is converted to electronic
	document output.
F.CPY	<b>Copying:</b> a function in which physical document input is duplicated to physical
	document output.
F.DSR	<b>Document storage and retrieval</b> : a function in which a document is stored during
	one job and retrieved during one or more subsequent jobs.

Designation	Definition
F.SMI	<b>Shared-medium interface</b> : a function that transmits or receives User Data or TSF
	Data over a communications medium which is or can be shared by other users, such
	as wired network media.

#### 6.3. SFR Package attributes

When a function is performing processing, storage, or transmission of data, the identity of the function is associated with that particular data as a security attribute. This attribute in the TOE model makes it possible to distinguish differences in Security Functional Requirements that depend on the function being performed. These attributes in the TOE are listed in Table 38.

**Table 38 SFR Package Attributes** 

Designation	Definition
+PRT	Indicates data that is associated with a print job.
+SCN	Indicates data that is associated with a scan job.
+CPY	Indicates data that is associated with a copy job.
+DSR	Indicates data that is associated with a document storage and retrieval job.
+SMI	Indicates data that is transmitted or received over a shared-medium interface.

# 6.4. 2600.1-PRT SFR Package for Hardcopy Device Print Functions, Operational Environment A

This SFR package, as a minimum, provides access controls for releasing pending hardcopy output to a Hardcopy Output Handler. In this ST, the SFRs of PRT-SFR Package are included in the description of 6.1.2.

## 6.5. 2600.1-SCN SFR Package for Hardcopy Device Scan Functions, Operational Environment A

This SFR package, as a minimum, provides access controls for transmitting scanned documents to another IT device. In this ST, the SFRs of SCN-SFR Package are included in the description of 6.1.2.

# 6.6. 2600.1-CPY SFR Package for Hardcopy Device Copy Functions, Operational Environment A

This SFR package, as a minimum, provides access controls for releasing pending copies of documents to a Hardcopy Output Handler. In this ST, the SFRs of CPY-SFR Package are included in the description of 6.1.2.

# 6.7. 2600.1-DSR SFR Package for Hardcopy Device Document Storage and Retrieval Functions, Operational Environment A

This SFR package, as a minimum provides access controls for storing and retrieving documents. In this ST, the SFRs of DSR-SFR Package are included in the description of 6.1.2. It is also used to specify additional rules for modifying stored documents.

# 6.8. 2600.1-SMI SFR Package for Hardcopy Device Shared-medium Interface Functions, Operational Environment A

This SFR package, as a minimum, provides protection for User Data or TSF Data that are transmitted or received over shared-medium interfaces and management control of data transmission involving shared-medium interfaces. In this ST, FAU\_GEN.1 in SMI SFR package is included in the description of 6.1.1 (1).

#### 6.8.1. Class FTP: Trusted paths/channels

FTP\_ITC.1 Inter-TSF trusted channel
Hierarchical to: No other components
Dependencies: No dependencies

FTP\_ITC.1.1 The TSF shall provide a communication channel between itself and another trusted IT

product that is logically distinct from other communication channels and provides assured identification of its end points and protection of the communicated data from

modification or disclosure.

FTP\_ITC.1.2 The TSF shall permit the TSF, another trusted IT product to initiate communication via

the trusted channel.

FTP\_ITC.1.3 The TSF shall initiate communication via the trusted channel for communication of

D.DOC, D.FUNC, D.PROT, and D.CONF over any Shared-medium Interface.

#### 6.8.2. Class FPT: Protection of the TSF

FPT\_FDI\_EXP.1 Restricted forwarding of data to external interfaces

**Hierarchical to:** No other components.

**Dependencies:** FMT\_SMF.1 Specification of Management Functions

**FMT\_SMR.1** Security roles

FPT\_FDI\_EXP.1.1 The TSF shall provide the capability to restrict data received on any external Interface

from being forwarded without further processing by the TSF to any Shared-medium

Interface.

#### 6.9. Security assurance requirements

The Table below lists the security assurance requirements for IEEE Std 2600.1-PP, Protection Profile for Hardcopy Devices, Operational Environment A, and related SFR packages, EAL 3 augmented by ALC\_FLR.2. In this ST, these SAR are used.

**Table 39 IEEE Std 2600.1 Security Assurance Requirements** 

Assurance Class	Assurance Components
ADV: Development	ADV_ARC.1 Security architecture description
	ADV_FSP.3 Functional specification with complete summary
	ADV_TDS.2 Architectural design
AGD: Guidance documents	AGD_OPE.1 Operational user guidance
	AGD_PRE.1 Preparative procedures
ALC: Life-cycle support	ALC_CMC.3 Authorization controls
	ALC_CMS.3 Implementation representation CM coverage
	ALC_DEL.1 Delivery procedures
	ALC_DVS.1 Identification of security measures
	ALC_FLR.2 Flaw reporting procedures (augmentation of EAL3)
	ALC_LCD.1 Developer defined life-cycle model
ASE: Security Target evaluation	ASE_CCL.1 Conformance claims
	ASE_ECD.1 Extended components definition
	ASE_INT.1 ST introduction
	ASE_OBJ.2 Security objectives
	ASE_REQ.2 Derived security requirements
	ASE_SPD.1 Security problem definition
	ASE_TSS.1 TOE summary specification
ATE: Tests	ATE_COV.2 Analysis of coverage
	ATE_DPT.1 Testing: basic design
	ATE_FUN.1 Functional testing
	ATE_IND.2 Independent testing – sample
AVA: Vulnerability assessment	AVA_VAN.2 Vulnerability analysis

### 6.10. Security requirements rationale

#### **6.10.1.** Common security requirements rationale

Table 40 and Table 41 demonstrate the completeness and sufficiency of SFRs that fulfill the objectives of the TOE. **Bold typeface** items provide principal (P) fulfillment of the objectives, and normal typeface items provide supporting (S) fulfillment.

**Table 40** Completeness of Common Security Requirements

**Table 41 Sufficiency of Common Security Requirements** 

Objectives	Description	SFRs	Purpose
O.DOC.NO_DIS	Protection of	FDP_ACC.1(a)	Enforces protection by
O.DOC.NO_DIS O.DOC.NO ALT	User Data from	FDF_ACC.1(a)	establishing an access
O.FUNC.NO_ALT	unauthorized		
O.FUNC.NO_AL1	disclosure or	EDD ACE 1(-)	control policy.
		FDP_ACF.1(a)	Supports access control
	alteration		policy by providing
			access control function.
		FIA_UID.1	Supports access control
			and security roles by
			requiring user
			identification.
		FMT_MSA.1(a)	Supports access control
			function by enforcing
			control of security
			attributes.
		FMT_MSA.3(a)	Supports access control
			function by enforcing
			control of security
			attribute defaults.
		FMT_SMF.1	Supports control of
			security attributes by
			requiring functions to
			control attributes.
		FMT_SMR.1	Supports control of
		_	security attributes by
			requiring security roles.
		FMT_MOF.1	Supports protection by
			management of security
			functions behavior.
O.DOC.NO_DIS	Protection of	FDP_RIP.1	Enforces protection by
	User Document		making residual data
	Data from		unavailable.
	unauthorized		
	disclosure		
O.CONF.NO_DIS	Protection of	FIA_UID.1	Supports access control
O.PROT.NO ALT	TSF Data from	12.1_02.5	and security roles by
O.CONF.NO ALT	unauthorized		requiring user
	disclosure or		identification.
	alteration	FMT_MTD.1	Enforces protection by
			restricting access.
		FMT_SMF.1	Supports control of
		I IVII _DIVIII • I	security attributes by
			requiring functions to
			control attributes.
		FMT_SMR.1	Supports control of
		ENTI_DIVIN.I	security attributes by
			requiring security roles.
		FMT_MOF.1	Supports protection by
		FW11_WOF.1	management of security
			functions behavior.
O.USER.AUTHORIZED	Authorization of	FDP_ACC.1(b)	Enforces authorization by
O.OBER.AUTHORIZED	Normal Users and	FDI_ACC.I(0)	establishing an access
	Administrators to		control policy.
	use the TOE	FDD ACE 1(b)	Supports access control
	use the TOE	FDP_ACF.1(b)	
			policy by providing
		EIA ATD 1	access control function.
		FIA_ATD.1	Supports authorization by
			associating security
			attributes with users.

Objectives	Description	SFRs	Purpose
		FIA_UAU.1	Enforces authorization by
			requiring user
		FIA_UAU.7	authentication.  Supports authorization by
		FIA_UAU./	requiring protected
			authentication feedback.
		FIA_UID.1	Enforces authorization by
			requiring user
		TIVA A FIX 4	identification.
		FIA_AFL.1	Enforces authorization by requiring authentication
			failure handling.
		FIA_USB.1	Enforces authorization by
			distinguishing subject
			security attributes
		FMT_MSA.1(b)	associated with user roles.
		FM1_MSA.1(b)	Supports access control function by enforcing
			control of security
			attributes.
		FMT_MSA.3(b)	Supports access control
			function by enforcing
			control of security attribute defaults.
		FMT_SMR.1	Supports authorization by
			requiring security roles.
		FMT_MOF.1	Supports protection by
			management of security functions behavior.
		FTA_SSL.3	Enforces authorization by
			terminating inactive
			sessions.
		FIA_SOS.1	Support authorization by
			requiring specification of secrets.
O.INTERFACE.MANAGED	Management of	FIA_UAU.1	Enforces management of
	external interfaces		external interfaces by
			requiring user
		THA HIATIM	authentication.
		FIA_UAU.7	Supports authorization by requiring protected
			authentication feedback.
		FIA_UID.1	Enforces management of
			external interfaces by
			requiring user
		FMT_MOF.1	identification.  Supports protection by
		1.1411 _14101.1	management of security
			functions behavior.
		FTA_SSL.3	Enforces management of
			external interfaces by
			terminating inactive sessions.
		FIA_SOS.1	Enforces authorization by
			requiring verrification
			of secrets.
O.SOFTWARE.VERIFIED	Verification of	FPT_TST.1	Enforces verification of
	software integrity		software by requiring self-tests.
	_1		sen-tests.

Objectives	Description	SFRs	Purpose
O.AUDIT.LOGGED	Logging and	FAU_GEN.1	Enforces audit policies by
	authorized access		requiring logging of
	to audit events		relevant events.
		FAU_GEN.2	Enforces audit policies by
			requiring logging of
			information associated
			with audited events.
		FIA_UID.1	Supports audit policies by
			associating user identity
			with events.
		FPT_STM.1	Supports audit policies by
			requiring time stamps
			associated with events.
O.CRYPTOGRAPHY	The encryption of	FCS_COP.1	Enforces cryptographic
	data		operation.
O.AUDIT_ACCESS.AUTHORIZED	Provisioning audit	FAU_SAR.1	Enforces providing audit
	records accessed in		records by requiring audit
	order to detect		review.
	potential security	FAU_SAR.2	Enforces providing audit
	violation, and only		records by requiring
	by authorized		restricted audit review.
	persons.		
O.AUDIT_STORAGE.PROTECTED	Protection of audit	FAU_STG.1	Enforces protection of
	records from		audit records by requiring
	unauthorized		protected audit trail
	access, deletion, and		storage.
	modifications.	FAU_STG.4	Enforces protection of
			audit records by requiring
			prevention of audit data
			loss.

#### **6.10.2.** PRT security requirements rationale

Table 42 and Table 43 demonstrate the completeness and sufficiency of SFRs that fulfill the objectives of the TOE. **Bold typeface** items provide principal (P) fulfillment of the objectives, and normal typeface items provide supporting (S) fulfillment.

 $Table\ 42\quad Completeness\ of\ PRT\ security\ requirements$ 

	Objectives

FTA_SSL.3	None	None	None
FPT_FDI_EXP.1	FMT_SMF.1 FMT_SMR.1	FMT_SMF.1, FMT_SMR.1	None
FCS_COP.1	[ FDP_ITC.1 or FDP_ITC.2 or FCS_CKM.1 ] FCS_CKM.4	None	Because the HDD Encryption Key for each machine has been already created and retained, the HDD Encryption Key will not be created nor disposed during operating the TOE. It is also impossible to read or modify the HDD Encryption Key.
FTP_ITC.1	None	None	None

#### 6.10.8. Security Assurance Requirements Rationale

This TOE is a digital multi functional peripheral which is commercially available. Because this TOE is supposed to be used in a general office, chance of an attack will be restricted. Thus, threat agents which have basic attack ability is assumed for this TOE. In order to counter the threat agents, it is decided to evaluate the range covered by analysis of the security policies for the TOE development (organized analysis and test of the design, and safety development environment). Failure report procedure for failure found after the operation starts is structured so that the TOE operates continuously and securely. Therefore, EAL3+ALC\_FLR.2 warranty package is applicable for the evaluation warranty level to this TOE. In addition, because SAR is the same as PP in this ST, dependency property is satisfied.

### 7. TOE SUMMARY SPECIFICATION

This section provides the mapping between the TOE Security Functional Requirements (SFRs) and the security functions implemented in the TOSHIBA e-STUDIO2050C/2550C Multifunctional Digital Systems with HDD(GE-1220) as an optional kit product. Table 53 shows the correspondences between SFRs and TOE security functions.

Table 53 Correspondences between SFRs and TOE Security Functions

			Sec	curity	Funct	ion

#### **FAU\_GEN.1** is realized by the following:

The TOE creates the audit log when an audit event occurs, and records it in the audit log file as shown in Table 54.

Table 54 Logged Event and Audit Log

Logged Events	Audit Log
Start-up/finish of the audit function	• Date/Time
Success/Failure of Login	<ul> <li>Error Level</li> </ul>
(Based on verification of User ID or Password)	<ul> <li>Message</li> </ul>
Release of login denied	<ul> <li>Error Code</li> </ul>
Login refusal by the certification trial number	<ul> <li>User Name</li> </ul>
of times over	
Failure of login password modify	
Success of Modify/Reading/Deletion demand	
of User documents	
Success of Modify/Deletion demand of	
Address Book	
Reading/Modify/Deletion demand of Queue	
Success/Failure of Encryption	
Success/Failure of Decryption	
Success of Print function demand	
Success of Scan function demand	
Success of Copy function demand	
Success of e-Filing function demand	
Termination of JOB	
Modify the time	
Termination of session due to time limit	
Failure of SSL comunication	
Identification of the initiator and target of	
failed SSL communication	
Failure of binding User Token	
Use of the management functions	

The TOE appends the following data to the event to be audited.

• Date/Time: A time when error/event occurred

• Error Level: Event category and degree of importance

Message: A sentence which explains the contents of the event

• Error Code: An event is defined as a code and expressed as 4-digit hexadecimal.

• User Name: Logged in User Name

### **FAU\_GEN.2** is realized by following:

When each event to be audited occurs, the TOE appends the User ID of a user who caused the event to the audit log.

#### **FAU\_SAR.1** is realized by following:

- The TOE provides a function by which U.NORMAL can refer to only the Job Log which is executed by the U.NORMAL on the control panel and TopAccess in the text format.
- The TOE provides a function by which U.ADMINISTRATOR or U.AUDITOR can refer to all log informations on TopAccess in the text format.
- The TOE provides a function by which U.ADMINISTRATOR or U.AUDITOR can refer to all Job logs on the control panel in the text format.
- The TOE provides a function by which U.ADMINISTRATOR can refer to all log informations by exporting in the format of XML or CSV.
- The TOE provides a function by which U.FAXOPERATOR can refer to the Internet Fax Transmission Log which is executed by the U.FAXOPERATOR on the control panel and TopAccess in the text format.

#### **FAU SAR.2** is realized by following:

- The TOE denies a read operation of the Jog log which is not executed by himself to the U.NORMAL.
- The TOE denies a read operation of the Internet Fax transmission log which is not executed by himself to the U.FAXOPERATOR.
- The TOE prohibits U.ACCOUNTMANAGER from accessing all Job logs and all Message logs.
- The TOE permits U.ADMINISTRATOR or U.AUDITOR to execute read operation for all Job logs and all Message logs.

#### **FAU\_STG.1** is realized by following:

- The TOE provides only U.ADMINISTRATOR with an operation function to delete all Job logs and Message logs.
- The TOE does not provide an interface which executes modification operation to all Job logs and all Message logs.

#### **FAU\_STG.4** is realized by following:

The TOE can record a new audit log data without any damage by overwriting the oldest audit log data when the audit log becomes full.

#### FCS COP.1 is realized using the following:

The TOE provides a function that encrypts D.DOC which is written in HDD with FIPS PUB 197-compliant AES encryption algorithm using 128 bit-length encryption key and decrypts D.DOC when retrieving it from the HDD.

#### FDP\_ACC.1(a), FDP\_ACF.1(a) are realized by using a combination of the following:

#### Common Access Control SFP

- The TOE permits the U.NORMAL who has a user ID for executing a D.DOC job operation to delete the target D.DOC. The D.DOC job operations include Copy, Print (except internet Fax reception), and Scan (including Internet Fax transmission).
- The TOE permits deletion operation of target D.DOC regarding Copy, Print (except Internet Fax reception) and Scan (including Internet Fax transmission) to the U.ADMINISTRATOR.
- The TOE permits deletion operation and modification operation of Address Book which is used for Scanning and e-Filing to the U.ADMINISTRATOR.

#### CPY Access Control SFP

• The TOE does not execute access restriction for D.DOC by which the U.NORMAL executes Copy operation.

#### PRT Access Control SFP

- The TOE denies Print operation of targeted D.DOC for the U.NORMAL who does not have the User ID which stores the D.DOC to be printed to the TOE.
- The TOE permits Print operation of Internet Fax-received document for the U.FAXOPERATOR.
- The TOE denies an operation to delete a print job from the Print Hold Queue for the U.NORMAL who does not have the User ID which saved the targeted D.DOC to the TOE.
- The TOE permits an operation to delete a print job in the Print Hold Queue for the U.ADMINISTRATOR.
- The TOE denies modification operation of the Print Job in the Print Hold Queue by any U.USER.
- The TOE denies modification operation and deletion operation of the Internet Fax reception Print Job in the Print Hold Queue by any U.USER.

#### SCN Access Control SFP

- The TOE permits an operation to transfer target D.DOC to the file server for the U.NORMAL who has the User ID which executed scanning job operation by copying.
- The TOE permits an operation to preview and transfer target D.DOC to outside, such as the file server, for the U.NORMAL who has the User ID which executed scanning job operation except by copying.
- The TOE permits an operation to preview and transfer target D.DOC of Internet Fax to the mail server for the U.FAXOPERATOR who has the User ID which executed scanning job operation.
- The TOE permits a modification operation per page of D.DOC for the U.NORMAL who has the User ID
  which executed scanning operation or U.FAXOPERATOR who has the User ID which executed scanning
  operation by Internet Fax operation.

#### **DSR Access Control SFP**

- The TOE permits preview operation, print operation, deletion operation, modification operation, and export
  operation to the client PC of D.DOC for the U.NORMAL or U.ADMINISTRATOR when the e-Filing Box
  Password entered by the U.NORMAL or U.ADMINISTRATOR matches the e-Filing Box Password of the
  D.DOC or the password of the Built-in Administrator Account.
- The TOE permits deletion operation of D.DOC regarding e-Filing for the U.ADMINISTRATOR.
- The TOE permits back up operation, restore operation, and delete operation of D.DOC with e-Filing Back Up/Restore Utility for the U.ADMINISTRATOR of the Built-in Administrator Account.

#### FDP\_ACC.1(b), FDP\_ACF.1(b) are realized by using a combination of the following:

The TOE controls the access to F.PRT, F.SCN, F.CPY, and F.DSR. These functions will be available to a user when U.ADMINISTRATOR allocates the Role expressly.

- The TOE permits to execute printing for the U.NORMAL or U.FAXOPERATOR if the Allocation Role of the U.NORMAL or U.FAXOPERATOR is included in the Permission Role of F.PRT.
- The TOE permits to execute scanning for the U.NORMAL or U.FAXOPERATOR if the Allocation Role of the U.NORMAL or U.FAXOPERATOR is included in the Permission Role of F.SCN.
- The TOE permits to execute copying functions for the U.NORMAL if the Allocation Role of the U.NORMAL is included in the Permission Role of F.CPY.
- The TOE permits to execute document storage and retrieval for the U.NORMAL if the Allocation Role of the U.NORMAL is included in the Permission Role of F.DSR.
- The TOE permits access to F.PRT, F.SCN, F.CPY, and F.DSR for U.ADMINISTRATOR of Built-in Administrator Account explicitly.

#### **FDP\_RIP.1** is realized by the following:

The TOE frees assignment of the storage area on the HDD after overwriting 00h, FFh and random data on a deleted D.DOC in order. The TOE provides a function which deletes remaining information of the deleted D.DOC so as to prevent it from being restored and decrypted by this overwriting method.

#### **FPT\_FDI\_EXP.1** is realized using the following:

The TOE controls not to permit to relay data entered from an external interface to the TOE to the Shared medium interface. This function prevents direct access to the Shared medium interface from an external interface of the TOE.

#### **FPT\_TST.1** is realized by the following:

The TOE executes TSF self test upon U.ADMINISTRATOR's request, verify integrity of all TSF execution codes and also verify integrity of HDD encryption key, which is TSF data, in order to verify TSF normal operation. In the case that abnormality is found on the test, an error message appears on the control panel and all functions other than the control panel are disabled so that the user cannot use the TOE.

#### **FPT\_STM.1** is realized by the following:

The TOE provides a time stamp (year, month, day, hour, minute, and second) for recording to the audit log.

#### **FIA\_UID.1, FIA\_UAU.1** are realized using the following mechanism:

The TOE requires a user to be identified and authenticated. The user identification and authentication is performed against an internal user accounts' database, in case an internal user management function is used. If User ID and Password do not match the internally stored credentials then access is denied and the user is prompted again. However, when print data from the printer driver is stored in the TOE, identification by the entered user ID is required to succeed before the storage. When storing emails from the mail server to the TOE, the TOE stores them without the identification and the authentication.

#### FIA\_UAU.7 is realized using the following:

The TOE displays dummy characters (e.g. "\*") in place of the input characters on the operation screen when the user inputs the password.

#### **FIA\_ATD.1** is realized using the following:

- The TOE associates the User ID, the Allocation Role, and the Role to the User as the security attribute, registers and retains it.
- The TOE recognizes the Allocation Role and Role from the User ID of a user whose identity is authenticated, and allows only U. ADMINISTRATOR and U.ACCOUNTMANAGER to modify the Allocation Role and modify and delete the Role.

#### **FIA\_USB.1** is realized using the following:

- The TOE associates the User ID, the Allocation Role, and the Role with the user who has succeeded in identity authentication.
- The TOE associates the e-Filing Box Password which is entered when accessing the e-Filing Box.

#### **FIA\_AFL.1** is realized using the following:

The TOE provides a function that locks a user out when the user fails in authentication.

• The TOE counts the number of failures during the specified period of time set by the U.ADMINISTRATOR per each User ID that tries to log in, and resets the number of failures to 0 when the user succeeds in login. When the number of failures of successive user authentication exceeds the allowable number of times set by U.ADMINISTRATOR (1 through 30 times), the TOE locks the User ID out for a certain period of time.

The TOE provides a function to unlock the lockout of the User ID which is locked out.

Automatic unlocking:

The lockout is automatically unlocked when the time reaches the unlock time set by U.ADMINISTRATOR per each User ID.

<u>Unlocking by U.ADMINISTRATOR</u>:

Unlocking of lockout by specifying the User ID which is under account lockout state by U.ADMINISTRATOR.

#### **FIA\_SOS.1** is realized using the following:

The TOE provides a function to inspect User Password at the time of registration/change of User Password or login of the user as shown in Table 25.

#### **FTA SSL.3** is realized using the following:

If a user does not operate on the control panel on the TOE for the set period of times, the TOE forcibly logs out. The set period is settable from 15 through 150 seconds. In addition, the TOE forcibly terminates the network session and logs out when the set period of time has passed after the final operation of the TOE using browsers or Client Utilities. The set period is settable from 5 through 999 minutes.

#### **FTP\_ITC.1** is realized by the following:

The TOE executes SSL communication so as to protect data during communication with the Client PC and among each types of server. For Scan job, e-mail reception, and Internet Fax transmission, TSF requests to start SSL communication when accessing the email server or saving a file to the filing box of the remote file server, and TSF starts communication after receiving the request to start SSL communication from the Client PC when accessing from the Client PC using Client Utility Software or the web browser.

#### **FMT\_SMR.1** is realized using the following:

The TOE retains Role associated with U.ADMINISTRATOR, U.ACCOUNTMANAGER, U.NORMAL, U.AUDITOR, and U.FAXOPERATOR and associates the Role to the appropriate user when registering a user.

#### **FMT\_MOF.1** is realized using the following:

The TOE provides a function to refer to Secure Channel function setting and to switch Enable/Disable setting only for U.ADMINOSTRATOR.

#### **FMT\_MTD.1** is realized using the following:

The TOE provides U.ADMINISTRATOR with the following operation functions.

Query, Deletion and Export of all Jog Logs

### **TOSHIBA**

#### Leading Innovation >>>

- Query, Deletion and Export of all Message Logs
- Modification and Export of U.ADMINISTRATOR's User Password
- Modification and Export of U.ACCOUNTMANAGER's User Password
- Modification and Export of U.AUDITOR's User Password
- Modification and Export of U.FAXOPERATOR's User Password
- Modification and Export of U.NORMAL's User Password
- Modification of ACL information
- Modification of the allowable number of entry of Login Password
- · Modification of Lockout Time
- Status Clear for Locked-out Account
- Modification of Auto Logout Time
- Modification of Date and Time Information
- Modification of User Password Policy Information

The TOE provides U.AUDITOR with the following operation functions.

- Query of all Jog Logs
- Ouery of all Message Logs
- · Modification of the own User Password

The TOE provides U.FAXOPERATOR with the following operation functions.

- Query of Internet Fax transmission own job log
- Modification of the own User Password

The TOE provides U.ACCOUNTMANAGER with the following operation functions.

- Modification and Expot of the U.ADMINISTRATOR's User Password
- Modification and Export of the U.ACCOUNTMANAGER's User Password
- Modification and Export of U.AUDITOR's User Password
- Modification and Export of U.FAXOPERATOR's User Password
- Modification and Export of U.U.NORMAL's User Password
- Modification of ACL Information
- Status Clear for Locked-out Account

The TOE provides U.NORMAL with the following operation functions.

- Query operation of own print log, scan log, and internet Fax transmission log..
- · Modification of the own User Password

The TOE does not provide a function to operate the HDD Encryption Key.

#### **FMT\_SMF.1** is realized using the following:

The TOE realizes FMT\_SMF.1 by providing the following security management functions.

#### Management of Audit records:

- Query, Delete and Export operations for all Job logs and all Message logs by the U.ADMINISTRATOR.
- Query operation for all Job logs and all Message logs by the U.AUDITOR.
- Query operation for Jog logs (Only Internet Fax transmission own job log) by the U.FAXOPERATOR.
- · Query operation for own print log, scan log, and Internet Fax transmission log by the U.NORMAL.

#### Management of Built-in Administrator Account's Password:

 Modification and Export operations for Built-in Administrator Account's Password by U.ADMINISTRATOR or U.ACCOUNTMANAGER.

### Management of Allocation Role and Permission Role:

- Modification operation for the Allocation Role by the U.ADMINISTRATOR or U.ACCOUNTMANAGER.
- Modification operation for the Permission Role by the U.ADMINISTRATOR or U.ACCOUNTMANAGER.
- Modification operation for the ACL information by the U.ADMINISTRATOR or U.ACCOUNTMANAGER.

#### Management of time stamp setting:

• Modification operation for Date and Time Information by the U.ADMINISTRATOR.

#### Management of the User ID:

Modification operation for the User ID by the U.ADMINISTRATOR or U.ACCOUNTMANAGER.

#### Management of User Password:

- Modification and Export operations for User Passwords for the U.ACCOUNTMANAGER, U.NORMAL, U.AUDITOR, U.FAXOPERATOR, and U.ADMINISTRATOR by the U.ADMINISTRATOR and U.ACCOUNTMANAGER.
- Modification operation for own User Password by the U.NORMAL.
- Modification operation for own User Password by the U.AUDITOR.
- Modification operation for own User Password by the U.FAXOPERATOR.

#### Management of user authentication failure handling:

- Modification operation for Allowable number of entry for Login Password by the U.ADMINISTRATOR.
- Modification operation for Lockout Time by the U.ADMINISTRATOR.
- Clear operation for Locked-out Account Status by the U.ADMINISTRATOR or U.ACCOUNTMANAGER.

#### Management of user password policy:

• Modification operation for the User Password policy Information by the U.ADMINISTRATOR.

#### Specification of the default time of user inactivity after which termination of the interactive session occurs:

Modification operation for Auto Logout Time by the U.ADMINISTRATOR.

#### Management of Network settings:

• Enable/Disable operation for the Secure Channel by the U.ADMINISTRATOR.

#### **FMT\_MSA.1(a)** is realized using the following:

- The TOE denies any operation regarding the User ID as the Object attribute.
- The TOE permits U.NORMAL and U.ADMINISTRATOR to delete and modify the e-Filing Box Password as the object attribute.
- The TOE permits U.ADMINISTRATOR and U.ACCOUNTMANAGER to modify the User ID as the subject attribute
- The TOE permits U.ADMINISTRATOR and U.ACCOUNTMANAGER to delete and modify the Role as the subject attribute.

#### **FMT\_MSA.1(b)** is realized using the following:

The TOE permits U.ADMINISTRATOR and U.ACCOUNTMANAGER to modify the Allocation Role which is the subject object attribute and Permission Role which is the object security attribute.

#### **FMT\_MSA.3(a)** is realized using the following:

The TOE performs access control to give the default value of the security attribute when D.DOC or D.FUNC which is related to +CPY, +PRT, +SCN, and +DSR is created as shown in Table 30. The TOE does not provide a function to specify the alternative initial value which overwrites the default value when these objects are created.

#### **FMT\_MSA.3(b)** is realized using the following:

The TOE performs access control to give the default value of the security attribute when CPY, PRT, SCN, and DSR functions are created as shown in Table 31. The TOE does not provide a function to specify the alternative initial value which overwrites the default value when these functions are created.

## **Annex - Acronyms**

Table 55 List of Acronyms

Acronym	Definition		
AES	Advanced Encryption Standard		
CC	Common Criteria for Information Technology Security Evaluation		
CEM	Common Evaluation Methodology for Information Technology Security		
DoD	United States Department of Defense		
EAL	Evaluation Assurance Level		
HDD	Hard Disk Drive		
PP	Protection Profile		
SAR	Security Assurance Requirement		
SFP	Security Function Policy		
SFR	Security Functional Requirement		
SMTP	Simple Mail Transfer Protocol		
SSL	Secure Socket Layer		
ST	Security Target		
TOE	Target of Evaluation		
TSF	TOE Security Functionality		
TSP	TOE Security Policy
